## FOREWORD

Since 2010, the Central Government has been publishing an annual Status Paper on Government Debt which provides a detailed account of the overall debt position of the Central Government, State Governments and General Government. It is an analytical assessment of their debt operations and debt portfolio. This Status Paper is the eleventh in the series.

2. Previously, information regarding Government debt was published in the "Handbook of Statistics on Central Government Debt" and "Debt Management Strategy (DMS)". These have been merged with the Status Paper to provide all debt-related information in one place. This publication covers information on various facets of debt management such as the debt profile of Central Government, Debt Management Strategy, trends, composition, maturity profile and other characteristics of Central Government debt. Moreover, a consolidated position of the General Government debt and State Governments' debt as at end-March 2021 is also presented. The Status Paper also provides an assessment of debt sustainability against the backdrop of internationally accepted parameters for undertaking such an exercise.

3. The Government raises funds primarily from the domestic market using market-based and fixed-rate instruments to finance its fiscal deficit. The conventional indicators of debt sustainability indicate a stable public debt profile for India. The share of short-term debt to the total debt remains low reducing the roll-over risk. The use of fixed coupon instruments to raise debt insulates it from interest rate volatility in the market. The currency risk associated with debt portfolio continues to be low since it is predominantly of domestic origin and denominated in domestic currency. The low share of external debt, almost entirely from official sources and on concessional terms, provides a safety net from volatility in the international financial markets.

4. The Debt Management Strategy (DMS) revolves around three broad pillars namely low cost, risk mitigation and market development in the medium term. The Government's borrowing programme is planned and executed in line with the DMS.

5. This Status Paper is an outcome of the consistent efforts of the officers in the Public Debt Management Cell (PDMC), Budget Division, Department of Economic Affairs, Ministry of Finance. I hope that this paper is eventually relied upon by academics, economists, policy specialists, rating agencies, students and the general public as a comprehensive and reliable source of information on Government debt.

## EXECUTIVE SUMMARY

Since 2010, the Central Government has been publishing an annual Status Paper on Government Debt that provides a detailed account of the overall debt position of the country. Since 2015-16, the publication also includes, “Handbook of Statistics on Central Government Debt” and “Debt Management Strategy”, which were subsumed in the Status paper, thus bringing all Government debt-related information at one place.

2. The Central Government Debt<sup>1</sup> includes all liabilities of Central Government contracted against the Consolidated Fund of India (defined as Public Debt), and liabilities in the Public Account, called Other Liabilities. Public debt is further classified into internal and external debt. Internal debt consists of marketable debt and non-marketable debt. Marketable debt comprises of Government dated securities and Treasury Bills, issued through auctions. Non-marketable debt comprises of intermediate Treasury Bills (14 days ITBs) issued to State Governments/UTs of Jammu & Kashmir and Puducherry as well as select Central Banks, special securities issued against small savings, special securities issued to public sector banks/EXIM Bank, securities issued to international financial institutions, and compensation and other bonds. Other liabilities include liabilities on account of State Provident Funds, Reserve Funds and Deposits, Other Accounts, etc. Total liabilities as reported in the Union Budget have been adjusted to reflect the position of the outstanding debt as an outcome of fiscal operations of the Central Government. A summary of the statistics presented in the paper has been tabulated below.

<b>Parameters/ Debt Indicators</b>	<b>2016-17</b>	<b>2017-18</b>	<b>2018-19</b>	<b>2019-20</b>	<b>2020-21</b>	<b>Reference</b>

3. Salient features of Government Debt are as under:

- i. Central Government total net liabilities stood at 59.2 per cent of GDP at end-March 2021, up from 49.1 per cent at end-March 2020.
- ii. General Government Debt (GGD)-GDP ratio was higher at 87.8 per cent at end-March 2021 as compared to 73.7 per cent at end-March 2020.
- iii. Of the Central Government total net liabilities at end-March 2021, 94.7 per cent were denominated in domestic currency while sovereign external debt constituted 5.3 per cent, implying low currency risk. Further, the sovereign external debt is entirely from official sources, which insulates it from volatility in the international capital markets.
- iv. The share of marketable securities in internal debt at 79.3 per cent at end-March 2021 was lower than 81.8 per cent at end-March 2020.
- v. Public debt in India is primarily contracted at fixed interest rates, with floating internal debt constituting only 1.7 per cent of GDP at end-March 2021. The debt portfolio is, therefore, insulated from interest rate volatility, which also provides stability to interest payments.
- vi. It has been the endeavour of the Government to elongate the maturity profile of its debt portfolio with a view to reduce the roll-over risk. The weighted average residual maturity of outstanding dated securities at end-March 2021 was 11.31 years with the tenure of the longest security being 40 years. At end-March 2021, 29.3 per cent of outstanding stock of government dated securities had a residual maturity of up to 5 years, indicating a relatively lower roll-over risk in the medium-term. Active debt management operations in the form of switches/conversions also help to elongate the maturity profile, while also reducing the roll-over risk.
- vii. The investor base as evident from the ownership pattern of dated securities indicates a gradual diversification and widening of market over time. Commercial banks remain the dominant investor class even as their share declined from 43.9 per cent at end-March 2013 to 37.8 per cent at end-March 2021. Insurance Companies and Provident Funds account for 25.3 per cent and 4.4 per cent, respectively, of outstanding stock of dated securities; creating stable demand for long-term securities.
- viii. Interest Payments to Revenue Receipts (IP-RR) ratio of the Centre was higher at 41.6 per cent in 2020-21 as compared to 35.6 per cent in 2012-13. Average Interest Cost (AIC) of the Centre stood at 6.3 per cent for 2020-21 (6.6 per cent in 2019-20). The IP-RR ratio and AIC for States worked out to be 14.1 per cent and 6.7 per cent, respectively in 2020-21. AIC is observed to be below the nominal GDP growth rate, except for 2020-21, indicating that India is comfortably placed in terms of debt sustainability parameters.

4. The Government published its first Debt Management Strategy (DMS) (earlier published across various documents of the Government and RBI) on December 31, 2015 which has been subsumed in this document. The DMS document comprises of three chapters, viz., Objectives and Scope of DMS; Debt Profile of the Central Government: Current Status and Strategic Objectives and Medium-Term Debt Strategy (MTDS) [2021-24].

- i. The underlying objective of the DMS is to ensure that the government's financing requirements are met at the lowest possible cost, consistent with a prudent degree of risk. The DMS has been articulated for the medium-term for a period of three years and is reviewed annually with roll-over period of next three years. The DMS revolves around three broad pillars, namely low cost, risk mitigation and market development. The Government's borrowing programme is planned and executed in terms of MTDS.
- ii. The debt profile of the Central Government as at end-March 2021 is analysed with regard to cost, maturity and potential risk factors. The risk analysis contains metrics such as average time to maturity, analysis of the redemption profile, average time to re-fixing, percentage of outstanding debt maturing in next 12 months, etc. The outcome of this exercise for debt portfolio of the Central Government at end-March 2021 reveals that it is stable with low risk.

**Status  
of  
Government Debt**

# CHAPTER I

## INTRODUCTION

The Government has been publishing the annual Status Paper on Government Debt since 2010-11, which provides a detailed analysis of the Government's debt position. In addition to the debt position of Central Government, the Status Paper covers State Governments/UTs debt and also General Government Debt in this publication. Since 2016-17, Medium Term Debt Management Strategy (MTDS) has also been made a part of this Paper, which provides information on Government's plan to achieve a composition of Government debt portfolio, based on its cost/risk trade-off considerations.

**1.2** The present Status Paper for 2020-21 is eleventh in this series and reinforces the Government's commitment to keep the level of public debt within sustainable limits while pursuing prudent debt management practices. The objectives of debt management strategy are to mobilise borrowings at low cost over the medium to long-term, with prudent level of risk and stable debt structure, while also developing a liquid and well-functioning secondary market in Government securities.

### Central Government Gross Fiscal Deficit / Liabilities

**1.3** Gross Fiscal Deficit (GFD) as a percentage of GDP declined during 2015-16 to 2018-19. However, it increased sharply to 4.6 per cent of GDP in 2019-20, which further increased significantly to 9.2 per cent of GDP in 2020-21 and is budgeted to decline to 6.9 per cent of GDP in 2021-22. This sharp increase in GFD is mainly attributable to rise in government expenditure due to the outbreak of covid-19 and moderation in revenue realisation. The major sources of GFD financing of the Central Government are market borrowings, small savings, State provident funds, external assistance and short-term borrowings. The financing pattern of the GFD is given in **Table 1.1(A)**.

**Table 1.1 (A): Financing of Gross Fiscal Deficit of the Centre**

**1.4** Central Government liabilities include debt contracted against the guarantee of the Consolidated Fund of India (defined as Public Debt) as well as liabilities in the Public Account. These liabilities, as reported in the budget documents of the Central Government, are shown in **Annex I**.

#### ***Adjustment to Reported Central Government Liabilities***

**1.5** Total liabilities<sup>1</sup> reported in the budget documents of the Central Government need to be adjusted so that the outstanding liabilities truly reflect the outcome of fiscal operations of the Central Government. The details of these adjustments were discussed in detail in the Status Paper for 2010-11, which are briefly explained below:

- (i) External debt – External debt is reported at historical exchange rates in the budget documents which does not capture the impact of exchange rate movements on these liabilities, when reported in domestic currency. Current value/liability of external debt may significantly differ from its originally contracted or historical value in view of movements in exchange rate over the life-cycle of these loans. Therefore, external debt is valued at current (end-of-year) exchange rates to reflect the true value of this liability.
- (ii) Liabilities under National Small Savings Fund (NSF) - The investment in Central Government Special Securities against outstanding balance as on March 31, 1999, investment in Central Government special securities against collections net of withdrawals from the funds received thereafter in the Fund and reinvestment in Central Government special securities out of the sums received on redemption of securities is considered as borrowing from NSF by the Central Government for financing its fiscal deficit and is shown under the head ‘Public Debt’ of the Central Government. Remaining liabilities of the NSF (i.e., total liabilities of NSF netted with investment in special securities issued by the Central Government as explained above) are included under ‘Public Account’ Liabilities of the Central Government in the Union Budget,

<sup>1</sup> ‘Liabilities’ includes both Public Debt and Public Account liabilities unless specified otherwise. The words government ‘liabilities’ and ‘debt’ are used interchangeably in the paper.

which also include investment in special State Government securities against net collections from April 1, 1999, and investments in public agencies from the NSSF. These investments, except those fully serviced by the Govt. of India, are netted out from the ‘Public Account’ liabilities stated in the Union Budget so that total liabilities of the Central Government reflect the outcome of fiscal operations of the Central Government only. Following the recommendations of the Fourteenth Finance Commission (FFC), since 2016-17, all States/UTs except four, namely Madhya Pradesh, Kerala, Arunachal Pradesh and UT of Delhi have opted to exclude themselves from borrowings through NSSF investments and hence, NSSF no longer finances their GFD. During 2020-21, investments were made in FCI, BMTPC and other public agencies.

**1.6** These adjustments in Central Government debt are shown in **Table 1.1 (B)**. Any reference to total outstanding liabilities of the Central Government in this Paper means total adjusted outstanding liabilities of the Central Government, as appearing in **Table 1.1 (B)**.

**1.7** The liability position of the Central Government, after making the above adjustments to the liability position as reported in the Union budget documents, in nominal terms and relative to GDP, is presented in **Table 1.2** and **Table 1.3**, respectively.

**1.8** Total liabilities which stood at ₹119 lakh crore at end-March 2021 accounted for 60.4 per cent of GDP are broadly classified under two heads, i.e., Public Debt and Public Account Liabilities. Total liabilities are further adjusted with respect to the cash balance lying in Government account on day of FY closing, details of which are given below. Central Government's outstanding total net liabilities (total liabilities minus Central Government liabilities on account of Pakistan Pre-partition debt and cash balance as on March 31, 2021) at ₹117 lakh crore accounted for 59.2 per cent of GDP<sup>2</sup> as at end-March 2021. Public Debt accounted for 90 per cent of total net liabilities, while Public Account Liabilities and EBRs constituted the remaining 10.9 per cent and 1.2 per cent respectively, at end-March 2021. A brief description of the major components of total liabilities of the Central Government is given in Table 1.2.

---

<sup>2</sup> GDP at market prices for 2020-21 is based on Revised Estimates of National Income 2020-21 and Quarterly Estimates (Q4) of GDP 2020-21 released by NSO on 31<sup>st</sup> May 2021.

## Public Debt

**1.9** Public Debt denotes liabilities payable by the Central Government, which are contracted against the Consolidated Fund of India, as provided under Article 292 of the Constitution of India. Central Government's Public Debt stood at ₹105.2 lakh crore, 53.3 per cent of GDP as at end-March 2021. It has been further classified under two heads, *i.e.*, Internal Debt and External Debt. Internal Debt constituted 94.2 per cent of Public Debt at end-March 2021. Details of Public Debt are provided in **Chapter II** of this Paper.

### Internal Debt

**1.10** Internal debt of the Central Government (₹99.1 lakh crore, 50.2 per cent of GDP at end-March 2021) consists of marketable securities (₹78.6 lakh crore, 39.8 per cent of GDP) and non-marketable securities (₹20.5 lakh crore, 10.4 per cent of GDP). Marketable securities include fixed tenor and fixed/floating rate dated securities, short-term borrowings through Treasury Bills and Cash Management Bills. As at end-March 2021, outstanding amounts under dated securities stood at ₹71.7 lakh crore (36.3 per cent of GDP) while outstanding amount under Treasury Bills stood at ₹6.9 lakh crore (3.5 per cent of GDP). No amount was outstanding under the Cash Management Bills at end-March 2021. The outstanding amount under dated securities and Treasury Bills accounted for 68.1 per cent and 6.6 per cent of the Public Debt, respectively (**Table 1.4**). The non-marketable securities in internal debt are the special Central Government securities issued to National Small Savings Fund (NSF), securities issued to international financial institutions, special securities issued against securitisation of balances under postal insurance and annuity funds (POLIF and RPOLIF), compensation & other bonds (including outstanding amounts under Sovereign Gold Bond Scheme and Gold Monetisation Scheme), special securities issued to public sector banks/ EXIM Bank/IDBI Bank/IIFCL and 14-day Intermediate Treasury Bills, which together constituted around 19.5 per cent of Public Debt.

**1.11** While Treasury Bills are issued to meet short-term cash requirements of the Government, dated securities are issued to mobilise longer term resources to finance the fiscal deficit. All marketable securities are issued through auctions as per the schedule notified through half-yearly/quarterly auction calendars. Issuance of dated securities is planned and conducted taking into account the debt management objectives of keeping the cost of debt low, while assuming prudent levels of risk and ensuring market development. An assessment of market liquidity conditions and market appetite for dated securities of different maturities influence the timing and maturity composition of primary issuances of dated securities.

**Table 1.4: Internal Debt as per cent of Public Debt and GDP as at end-March 2021**

Components	Amount (in ₹ crore)	As per cent of Public Debt	As per cent of GDP

Source: Finance Accounts, CGA

## External Debt

**1.12** External Debt at current exchange rates stood at ₹6.15 lakh crore at end-March 2021 (excluding SDR amounting to ₹41,442 crore) and accounted for 3.1 per cent of GDP and 5.8 per cent of the Public Debt of the Central Government. As the State Governments are not empowered to contract external debt, all external loans are contracted by the Central Government and those intended for State Government projects are on-lent to States. Most of the external debt is sourced from multilateral agencies (International Bank for Reconstruction and Development, Asian Development Bank, etc.) and official bilateral agencies. There is no sovereign borrowing from international capital markets. The entire external debt, in terms of original maturity, is on long-term basis and a major part is at fixed interest rates. A detailed analysis of external debt is covered in **Chapter II**.

## Public Account Liabilities

**1.13** Public Account Liabilities include liabilities on account of National Small Savings Fund (NSSF), State Provident Funds, Reserve Funds and Deposits, Other Accounts and NSSF loans to public agencies but which are fully serviced by the Government of India. These liabilities were at ₹12.7 lakh crore (6.5 per cent of GDP at end-March 2021). NSSF liabilities accounted for 16.8 per cent of Public Account Liabilities, while the shares of ‘Reserve Funds and Deposits’ and ‘State Provident Fund’ were 26.2 per cent and 19.4 per cent, respectively. With the adjustment, as explained in para 1.5 (ii), NSSF liabilities in the Public Account represent the total deposits under small saving schemes (Savings Deposits, Savings Certificate and Public Provident Fund) *less* total investments of NSSF in (a) Central Government Special Securities against outstanding balance as on March 31, 1999, (b) special Central Government securities against collections from April 1, 1999, (c) re-investment in Central Government Special Securities out of the sums received on redemption of securities, (d) Special State Government securities against collections from April 1, 1999, and (e) investments in various public agencies. This net liability of the Central Government towards NSSF represents the accumulated balance income (-) / expenditure (+) in the NSSF over the years, and cash balances. Liabilities under ‘Other Accounts’ include, among others, special bonds issued to Oil Marketing Companies (OMC), fertiliser companies and Food Corporation of India (FCI). At end-March 2021, these liabilities under ‘Other Accounts’ accounted for 35.0 per cent of Public Account Liabilities. Details of Public Account Liabilities are discussed in **Chapter III** of this Paper.

## Extra Budgetary Resources (EBRs)

**1.14** Extra budgetary resources liabilities are defined as those financial liabilities of the Govt. that are raised by public sector undertakings but which are fully serviced, in respect of principal and interest, by the Govt. of India through the Union Budget. Total outstanding liabilities on account of EBRs (fully serviced bonds) stood at ₹1.4 lakh crore at end-March 2021, which is 0.7 per cent of GDP in 2020-21.

## **Fiscal Consolidation**

**1.15** Central Government is committed towards fiscal consolidation in a phased manner. In India, fiscal consolidation or the fiscal roadmap for the Government is expressed in terms of the targets for fiscal parameters to be realised in successive budgets, as provided in the Fiscal Responsibility and Budget Management (FRBM) Act, 2003. The FRBM framework has a twin focus on debt and fiscal deficit and indicates that the Government of India is committed to follow the path of fiscal consolidation. The Govt. has been prescribing a glide path towards reduction in fiscal deficit with resultant reduction in public debt to GDP ratio. However, the arrival of Covid-19 pandemic towards the end of FY 2019-20 and its continuation in FY 2020-21 and beyond has disrupted the glide path severely. The Covid-19 has affected the Government receipts and expenditure in unprecedented way, forcing the review of glide path as prescribed earlier.

**1.16** The Medium Term Fiscal Policy cum Fiscal Policy Strategy Statement (MTFP cum FPSS) presented along with the Union Budget for FY 2021-22 revised the target of fiscal deficit to 9.5 percent of GDP in RE 2020-21 compared to the budgeted level of 3.5 percent of GDP. This increase was attributed to increased expenditure on account of various schemes announced by the Government in the light of Covid-19 pandemic, sharp shortfall in revenue receipts (both tax and non-tax), and significant drop in disinvestment receipts. While being committed to the fiscal consolidation, however, some fiscal flexibility was desirable, in the light of envisioned socio-economic growth and prosperity of the nation amid continuous changing domestic and global scenarios and challenges. A need for a higher public spending was felt crucial for providing required impetus to economic growth. In the budget 2021-22, the Government has proposed to achieve the consolidation by first, increasing the buoyancy of tax revenue through improved compliance, and secondly, by increased receipts from monetisation of assets, including Public Sector Enterprises and land. In the light of current global scenario and challenges, the fifteenth finance commission (15th FC) of India has recommended an expanded fiscal space, allowing fiscal deficit to reach 4.5 per cent of GDP by 2025-26. It has also recommended bringing the public debt-to-GDP ratio down from 89.8% of GDP in 2020-21 to 85.7% of GDP in 2025-26. The commission had recommended setting up of a high-powered inter-governmental group for crafting a new FRBM framework and oversee its implementation. The Covid-19 related uncertainty makes any forecast of economic growth and fiscal variables including the specification of a return path challenging. The Government endeavours to return to the path of fiscal consolidation as soon as economic growth and receipts return to their long-run averages.

**1.17** In terms of Section 2 (aa) of the FRBM Act 2003, the Central Government Debt is defined to include all liabilities of Central Government against the Consolidated Fund of India including external debt valued at current exchange rates, all public account liabilities, and such financial liabilities of any body-corporate or other entity owned or controlled by the Central Government, which the Government is to repay or service through the Annual Financial Statement, reduced by the cash balance available at the end of that date.

**1.18** Accordingly, under the MTFP cum FPSS presented in the Union Budget for 2022-23, the Central Government debt was estimated at 60.2 per cent of GDP in 2022-23 (59.9 per cent of GDP in 2021-22 (RE)), respectively. The Government would pursue a broad path of fiscal consolidation to attain a level of fiscal deficit lower than 4.5 per cent of GDP by FY 2025-26. The Government has reiterated to continue with its efforts to attain sustained, broad based economic growth, and take such measures as may be necessary to protect the lives/ livelihoods of the people, while adhering to the path of fiscal consolidation.

## General Government Debt

**1.19** General Government Debt represents the indebtedness of the Government sector (Central, State Governments and UTs with legislature). This is arrived at by consolidating the liabilities of the Central Government, State Governments and UTs with legislature and netting out inter-governmental transactions *viz.*, (i) investment in T-Bills (14-day ITBs and Auction Treasury Bills (91/182/364-day T-Bills) by States/UTs with legislature which represents lending by States/UTs to the Centre; and (ii) Centre's loans to States and UTs. At end-March 2021, General Government Debt worked out to be 87.8 per cent of GDP (**Table 1.5**). A detailed analysis of liabilities of States/UTs and General Government Debt has been provided in **Chapter IV**.

**Table 1.5: General Government Debt**

Year	Amount (in ₹ crore)	As percentage of GDP
2011-12	5917279	67.7
2012-13	6655685	66.9
2013-14	7566773	67.4
2014-15	8334826	66.8
2015-16	9475272	68.8
2016-17	10524777	68.4
2017-18	11702891	68.5
2018-19	12982467	68.7
2019-20	14992765	73.7
2020-21 (RE)	17346517	87.8

## Debt Sustainability

**1.20** A debt sustainability exercise has been undertaken by analysing trends in primary surplus, growth-interest rate differentials, and cost and risk characteristics of debt portfolio of the Central Government. The maturity profile of debt, its composition, cost, share of external debt in Central Government liabilities are some of the important parameters to assess debt sustainability. Public debt in India is largely funded through domestic savings by primarily issuing fixed interest rate instruments, and is supported by a large domestic institutional investor base. The long maturity profile of India's debt reduces roll-over risk. These factors underlie long-term debt sustainability in the Indian context. An assessment of public debt sustainability in India, in terms of some of the parameters, such as debt level, its composition/structure, ownership pattern, cost and other risk parameters, have been discussed in **Chapter V** of this Paper.

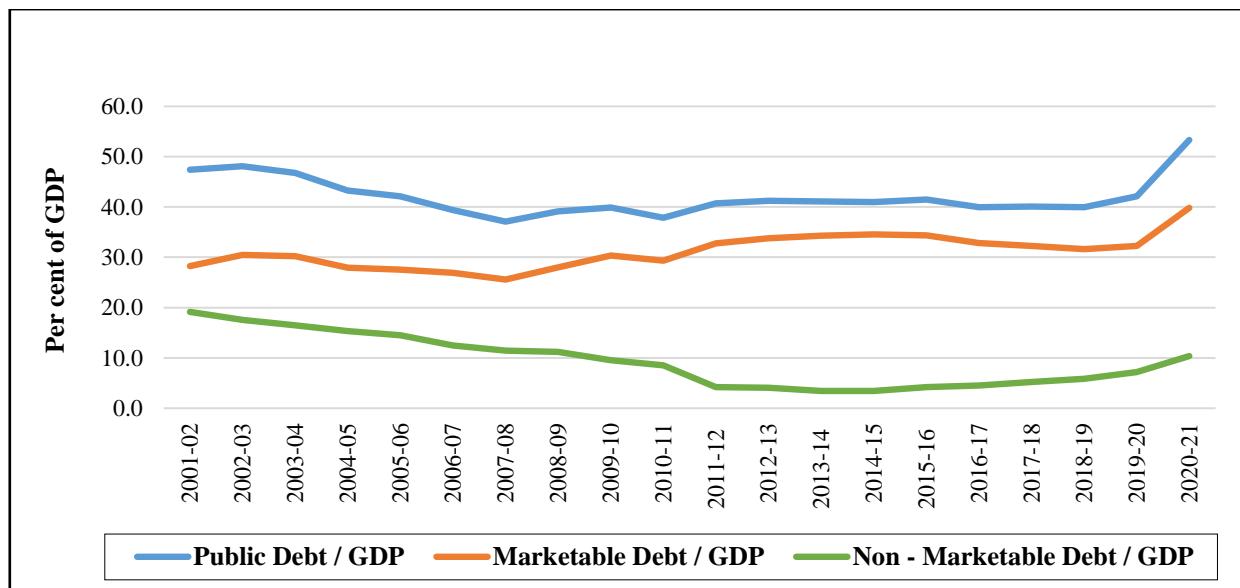

## CHAPTER II

### PUBLIC DEBT – CENTRAL GOVERNMENT

**2.1** Public Debt, as defined in para 1.9 of this Report, which had moved in a narrow range during 2016-17 to 2018-19, moved up to 53.3 per cent of GDP at end-March 2021 from 42.1 per cent of GDP at end-March 2020 (**Chart 2.1**).

**Chart 2.1: Trends in Public Debt**

**2.2** Public Debt, as shown in **Table 2.1**, comprises of two broad components, i.e., Internal Debt and External Debt. Internal Debt is further classified into marketable and non-marketable debt.

**2.3** Public Debt accounted for 90 per cent of total net liabilities at end-March 2021, up from 85.7 per cent as at end-March 2020 and increase came primarily from internal debt. The share of marketable debt in total net liabilities has declined since from 73.5 per cent in 2014-15 to 67.2 per cent at end-March 2021. There was a corresponding increase in the share of non-marketable debt in net total liabilities from 7.3 per cent at end-March 2015 to 17.5 per cent at end-March 2021 on account of larger mobilisation of resources from NSSF towards financing of fiscal deficit as well as special securities issuance to public sector banks/ EXIM Bank/IDBI Bank Ltd./IIFCL.

**Table 2.1: Share of Public Debt in Total Net Liabilities**

(Percent of Total Net Liabilities)

Components	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>

# as per the revised definition of Public Debt in amended FRBM Act 2003.

## INTERNAL DEBT<sup>6</sup>

**2.4** As mentioned in **para 1.10 of Chapter 1**, internal debt of the Central Government at end-March 2021 accounted for 50.2 per cent of GDP in 2020-21. It constituted 94.2 per cent of public debt at end-March 2021. Marketable debt constituted 74.7 per cent of Public Debt and 67.2 per cent of net total liabilities at end-March 2021. Non-marketable debt, on the other hand, accounted for 19.5 per cent of Public Debt and 17.5 per cent of net total liabilities at end-March 2021. Major components of marketable debt are dated securities and treasury bills. Major components of non-marketable debt include special securities issued against small savings, securities issued to international financial institutions, special securities issued against securitisation of balances under postal insurance and annuity funds (POLIF and RPOLIF), compensation & other bonds (including outstanding amounts under Sovereign Gold Bond Scheme and Gold Monetisation Scheme), special securities issued to public sector banks/ EXIM Bank/IDBI Bank/IIFCL, and 14-day Intermediate Treasury Bills.

## MARKETABLE DEBT

### Dated Securities

**2.5** Dated securities are the predominant source for financing the GFD of the Central Government, even as their share in total fiscal deficit financing has declined over the years. The issuance of dated

<sup>6</sup> *Debt contracted under Consolidated Fund of India from domestic lenders i.e., debt excluding MSS issuance, external debt and public account liabilities.*

securities is as per the borrowing plan announced through half-yearly auction calendars covering April-September and October-March period. The securities issued are of different maturities ranging between 2 to 40 years and include both, fixed and floating rate securities (Box 2.1). The share of dated securities in public debt stood at 68.1 per cent at end-March 2021. In the past, dated securities were also issued as part of conversion into marketable securities of (i) special securities issued in lieu of *ad hoc* T-Bills (process completed in 2003-04) and (ii) recapitalisation bonds issued to nationalised banks (completed in 2007-08). A break-up of the outstanding stock of dated securities during 2014-15 to 2020-21 is given in **Table 2.2**.

**Table 2.2: Outstanding Marketable Dated Securities**

(₹ crore)

Components	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21
1	2	3	4	5	6	7	8
(i) Issued through Borrowings	3870925	4277975	4628678	5049935	5479332	5965318	7114335
(ii) Conversion of Special Securities issued in lieu of <i>ad hoc</i> T-Bills into marketable securities	67818	64818	64818	53818	47688	35688	33411
(iii) Conversion of recapitalisation bonds issued to Nationalised Banks into marketable securities	20809	20809	20809	20809	20809	20809	20809
Total Dated Securities (i to iii)	3959552	4363602	4714305	5124562	5547829	6021815	7168555

<i>Percentage of GDP</i>	31.8	31.7	30.6	30.0	29.4	29.6	36.3

Source: Finance Accounts (Various Issues), CGA

**2.6** During 2020-21, net market borrowings through dated securities (*excluding switches/buyback of securities*) were higher at ₹11,46,740 crore as compared to ₹4,73,986 crore in 2019-20.

### Floating Rate Bonds (FRB)

**2.7** The issuance of floating rate bonds (FRBs) by the Government of India was started in FY 02 when the first such bond, FRB - 2006 was issued on November 22, 2001 with a tenor of 5 years to raise ₹2,000 crore. The interest is payable on a half-yearly basis and interest rate on these bonds is linked to (i) variable base rate calculated on the average/weighted average rate (rounded off up to two decimal places) arrived at in the specified number of auctions of Government of India 182-day T-Bills held just prior to the half-yearly fixation/ reset of coupon date and (ii) a pre-determined spread decided at the time of first issuance. There have been 15<sup>7</sup> issuances of FRBs since November 22, 2001 and four FRBs were outstanding as on March 31, 2021; the details are given in the **Table 2.3**:

<sup>7</sup> FRB 2033 was issued on June 22, 2020.

**Table 2.3: Outstanding Stock under FRBs as on March 31, 2021**

(Amount in ₹crore)

<b>Security</b>	<b>Outstanding Stock</b>
FRB 2024	1,16,965.03
FRB 2031	1,20,000.00
FRB 2033	94,581.15
FRB 2035	350.00
Total outstanding stock of FRBs	3,31,896.18
Total outstanding stock of dated securities	7,16,855.18
Share of FRBs in total stock of dated securities (%)	4.6

**Buyback/Switches of Central Government Securities**

**2.8** The practice of debt buyback/switches of Central Government securities was started on July 19, 2003. The underlying objective is to manage the debt profile and cash flows in line with the debt management objectives of the Central Government. From 2013-14 onwards, buyback/switches of G-Secs has become a regular feature of cash and debt management operations of the Central Government. The switches/conversions help to reduce the redemption pressure/bunching of repayments in any given year, and are used to elongate the maturity profile of outstanding G-Secs. Buy-back also serves the same purpose but the quantum of buy-back operations depends on the availability of cash surplus in the Central Government account.

**2.9** The details of buy-back and conversion (switch) operations undertaken during 2013-14 to 2020-21 are given as under.

**Table 2.4: Buy-back and Switch (Conversion) Operations during 2013-14 to 2020-21**

(Amount in ₹crore)

<b>Financial Year</b>	<b>Buy-back</b>		<b>Conversion<sup>8</sup></b>
	<b>Amount offered</b>	<b>Amount Accepted</b>	<b>Face value of security/ies converted into longer tenor securities</b>
2013-14	20000	15590	31000
2014-15	28000	18805	39028
2015-16	48790	37526	37349
2016-17	68500	64133	40510
2017-18	89249	41555	58075
2018-19	-	-	28059
2019-20	-	-	164803
2020-21	-	-	153418

<sup>8</sup>Also includes conversion of securities maturing in the same financial year.

## **Maturity Profile of Dated Securities**

**2.10** The tenor of new issuances is a function of acceptable roll-over risk as well as market appetite across various maturity segments. Nonetheless, it has been the endeavour to elongate the maturity profile of dated securities. Issuance of dated securities is planned and conducted, keeping in view the debt management objective of keeping the cost of debt low, while assuming prudent levels of risk and promoting market development. Market borrowings through dated securities were undertaken on these lines in 2020-21.

**2.11** The maturity profile of outstanding stock of dated securities at end-March 2021 indicates that the proportion of dated securities maturing in less than 5 years stood at 29.3 per cent at the end of FY 2021 (29.0 per cent in FY 2020). The share of 5-10 year bucket was 29.0 per cent, closely followed by the 10-20 year maturity bucket with a share of 22.5 per cent at end-March 2021.

**Table 2.5: Maturity Profile of Outstanding Central Government Dated Securities<sup>9</sup>**

(Per cent of total)

Maturity Bucket	End-March 2012	End-March 2013	End-March 2014	End-March 2015	End-March 2016	End-March 2017	End-March 2018	End-March 2019	End-March 2020	End-March 2021
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>
Less than 1 year	3.5	3.1	4.0	3.7	4.0	3.3	3.2	4.3	3.9	3.7
1-5 Years	26.7	27.9	26.0	24.6	22.9	21.7	23.0	24.0	25.1	25.6
5-10 Years	34.7	35.0	31.5	30.4	29.6	33.3	32.1	31.2	30.0	29.0
10-20 Years	22.0	22.9	25.2	28.3	30.3	29.3	28.6	26.0	24.1	22.5
20 years and above	13.1	11.2	13.3	13.1	13.3	12.4	13.3	14.5	16.9	19.2

**2.12** The details of maturity and yield on Central Government's dated securities in terms of issuances during the year and on outstanding stock are given in **Table 2.6**. The weighted average maturity of dated securities issued during 2020-21 decreased to 14.49 years from 16.15 years in 2019-20. This was due to higher issuances of securities in the shorter maturity bucket during the year to raise resources for on-lending to States towards GST shortfall compensation. A major part of issuances of dated securities continued to be in 10-14 years maturity segment. The weighted average maturity of outstanding stock of dated securities at end-March 2021 increased to 11.31 years from 10.72 years in 2019-20. The share of maturity bucket-wise issuances in the total issuances during 2010-11 to 2020-21 is given in **Table 2.6**. Further details of maturity profile and yields are given at **Annex III** and **Annex IV** respectively.

**Table 2.6: Maturity and Yield of Dated Securities of Central Government**

Year	Issues during the year			Outstanding Stock	
	Weighted Average Yield (%)	Weighted Average Maturity (Years)		Weighted Average Coupon	Weighted Average Maturity (Years)
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	
2010-11	7.92	11.62		7.81	9.64
2011-12	8.52	12.66		7.88	9.60
2012-13	8.36	13.50		7.97	9.66

<sup>9</sup> Based on residual maturity basis.

Year	Issues during the year			Outstanding Stock	
	Weighted Average Yield (%)	Weighted Average Maturity (Years)		Weighted Average Coupon	Weighted Average Maturity (Years)
1	2	3	4	5	
2013-14	8.39	14.22	7.98	10.00	
2014-15	8.51	14.66	8.09	10.23	
2015-16	7.89	16.07	8.08	10.50	
2016-17	7.16	14.76	7.99	10.65	
2017-18	6.98	14.13	7.85	10.62	
2018-19	7.77	14.73	7.84	10.40	
2019-20	6.84	16.15	7.71	10.72	
2020-21	5.79	14.49	7.27	11.31	

**Table 2.7: G-Sec Issuances by Maturity Buckets (in %)**

Components	1-4 years	5-9 years	10-14 years	15-24 years	25 years & above	Total	Gross Amount (₹crore)
	1	2	3	4	5		7
FY 21	9.8	20.6	48.1	0.0	21.5	100	1370324
FY 20	7.9	21.0	36.2	10.6	24.4	100	710000

Components	1-4 years	5-9 years	10-14 years	15-19 years	20 years & above	Total	Gross Amount (₹crore)
	1	2	3	4	5		7
FY 19	8.9	21.2	31.2	14.9	23.8	100	571000
FY 18	0	20.6	52.2	12.6	14.6	100	588000
FY 17	0	18.6	52.1	14.1	15.3	100	582000
FY 16	0	16.1	45.5	19.1	19.3	100	585000
FY 15	0	23.8	41.9	17.8	16.6	100	592000
FY 14	0	27.0	46.8	13.4	13.0	100	563500
FY 13	0	25.4	46.6	11.5	16.5	100	558000
FY 12	0	27.3	46.3	12.7	13.7	100	510000

**2.13** The weighted average yield is largely a function of the interest rate environment. The weighted average yield for the issuances made in 2020-21 at 5.79 per cent was lower than that in 2019-20, reflecting the impact of accommodative monetary policy stance, reduction in the repo rate by RBI by 40 bps during the year, comfortable liquidity conditions in the market on account of LTROs, outright and special OMOs conducted by RBI. The bid-cover ratio in the primary auctions, which indicates the amount of competitive bids received against the notified amount or the response of investors to issuance of dated securities, was lowest in the maturity bucket of 5-9 years but was higher in the maturity bucket of 1-4 years in 2020-21. The details of Central Government market borrowings during 2020-21 are presented in **Annex HB-VII**.

**Table 2.8: G-Sec Issuances under different maturity buckets**

Components	1-4 years	5-9 years	10-14 years	15-19 years	20 years &above	Total

Average Bid-Cover Ratio (times)	4.01	2.80	2.96	0	2.87	2.99

### **Coupon on Dated Securities**

**2.14** The dated securities are primarily issued at fixed coupon rate. However, there is a small proportion of floating rate instruments, such as Floating Rate Bonds (FRBs) and Inflation Indexed Bonds (IIBs) (totalling 4.65 per cent of total outstanding stock of dated securities at end-March 2021), whose coupon is benchmarked to treasury bill yields and inflation indices, respectively. The weighted average coupon of outstanding dated securities (including FRBs) was at 7.27 per cent at end-March 2021 (7.71 per cent at end-March 2020).

**2.15** Outstanding dated securities as on March 31, 2021 are listed in **Annex V**. At the end of March 2021, of the total outstanding stock of dated securities, including FRBs and IIBs, 19.3 per cent have coupon rate up to 7 per cent; 33.3 per cent carry coupon rate of more than 7 per cent and up to 8 per cent; 29.4 per cent carry coupon rate of above 8.0 per cent and up to 9.0 per cent; and only 3.5 per cent carry coupon rate of more than 9.0 per cent.

### **Redemption Profile of Dated Securities**

**2.16** The redemption profile of outstanding government securities at end-March 2021 in the next 5 years i.e., from the year 2021-22 is given in **Table 2.9**. The redemption profile indicates elevated roll-over risk during 2022-23 to 2025-26, underlying the need for moderation through buybacks and switches.

**Table 2.9: Maturity Trend of Dated Securities**

Items	2021-22	2022-23	2023-24	2024-25	2025-26
1	2	3	4	5	6

<i>Percentage of the Outstanding Stock*</i>	3.7	6.0	5.9	6.1	7.7
<i>Percentage of GDP (₹19745670crore; 2020-21) **</i>	1.2	1.7	1.5	1.4	1.6

# More issuances may happen in coming years

\* Outstanding as on March 31, 2021

\*\* As per MTFP statement presented with the Union Budget for 2021-22, nominal GDP growth for 2021-22 and 2022-23 was assumed at 12.6% and 11.1%, respectively. We have assumed 11.1% growth in nominal GDP in 2023-24, 2024-25 and 2025-26.

### **Ownership pattern**

**2.17** Government securities are primarily held by domestic institutional investors. Ownership pattern of dated securities indicates that commercial banks continued to be the largest holder of total outstanding G-Secs with a share of 37.8 per cent at end-March 2021. The share of insurance

companies improved from 19.5 per cent in FY14 to 25.3 per cent in FY21. The share of RBI increased from 11.6 per cent in FY18 to 16.2 per cent in FY21. The amount of OMO purchase auctions conducted by the RBI during 2020-21 was ₹2,62,132 crore as compared to ₹1,32,500 crore in 2019-20 (**Refer to Box 2.1**).

2.18 On Nov 12<sup>th</sup> 2021, the Reserve Bank of India launched the Retail Direct Scheme with an objective to bring Government Securities (G-Sec) within easy reach of the common man by simplifying the process of investment. Under the scheme, the investor can place non-competitive bids in primary issuance of all Central Government securities including Treasury Bills and Sovereign Gold bonds as well as securities issued by various State Governments using an online portal. The Retail Direct Scheme would facilitate the financial inclusion and broaden the investor base as it will channelize the savings of middle class, small businessmen and senior citizens directly into risk free government securities.

2.19 As of now, bulk of the G-Secs are held by few institutional investors like commercial banks, insurance companies and mutual funds. The participation of retail investors is expected to change the structure of G-Sec market significantly. Diversified investor base provides flexibility to the Government in its borrowing program besides enabling better price discovery in the G-Sec market. Thus, the opening up of G-Sec market to retail investors would not only widen investor base but would assure stable demand for G-Sec from different investor category so that it does not hamper the loss of demand from any particular owner class.

### Medium-Term Framework for Investment in Government Securities by Foreign Portfolio Investors

**2.20** With an objective of having a more predictable regime for investment by the foreign portfolio investors (FPIs), the Medium-Term Framework (MTF) for investment by FPIs in Central Government Securities and State Government Securities (SDLs) was introduced in October 2015. Under this framework, investment limits for FPIs were specified as a percentage of outstanding stock of G-Secs and SDLs. As the MTF provided for a staggered increase in investment limits for FPI in Government securities, these investment limits have been revised from time to time since October 6, 2015. The limits for FPI investment in Government securities and State Development Loans have been kept unchanged at 6 per cent and 2 per cent, respectively of outstanding stock of these securities for FY 2021-22. The operational guidelines have also been liberalised gradually to facilitate investment by FPIs in Government Securities. The details of revisions in investment limits are presented in **Table 2.11**.

**Table 2.11: Medium-Term Framework for Investment in Government Securities by Foreign Portfolio Investors**

	<b>Investment Limit</b>	<b>As percentage of outstanding stock</b>	<b>General/Long-Term FPIs</b>
October 2015	G-Secs	To be increased in phases to reach 5% of the outstanding stock by March 2018	Allocation between ‘Long-term’ and ‘General’ category to be in the ratio of 60:40
	SDL	To be increased in phases to reach 2% of the outstanding stock by March 2018	

	<b>Investment Limit</b>	<b>As percentage of outstanding stock</b>	<b>General/Long-Term FPIs</b>
April 2018	G-Secs	To be increased to 5.5% of the outstanding stock in 2018-19 and further to 6.0% of the outstanding stock in 2019-20	Allocation of increase in G-Sec limit between ‘Long-term’ and ‘General’ category to be in the ratio of 50:50 for the years 2018-19 and 2019-20.
	SDL	Remains unchanged at 2.0% of the outstanding stock in 2018-19 and 2019-20.	
April 2020	G-Secs	Remains unchanged at 6.0% of the outstanding stock of securities for FY 2020-21	Allocation of incremental changes in the G-Sec limit (in absolute terms) over the two sub-categories-‘General’ and ‘Long-term’ retained at 50:50 for FY 2020-21.
	SDL	Remains unchanged at 2.0% of the outstanding stock of securities for FY 2020-21.	The entire increase in limits for SDLs (in absolute terms) added to the ‘General’ sub-category of SDLs.
May 2021	G-Secs	Remains unchanged at 6.0% of the outstanding stock of securities for FY 2021-22	The allocation of incremental changes in the G-sec limit (in absolute terms) over the two sub-categories – ‘General’ and ‘Long-term’ retained at 50:50 for FY 2021-22.
	SDL	Remains unchanged at 2.0% of the outstanding stock of securities for FY 2021-22.	The entire increase in limits for SDLs (in absolute terms) added to the ‘General’ sub-category of SDLs

### Voluntary Retention Route (VRR) for FPIs

**2.21** A separate scheme called the ‘Voluntary Retention Route’ (VRR) was introduced on March 1, 2019 to encourage Foreign Portfolio Investors (FPIs) to undertake long-term investments in Indian debt markets. Under this Route, FPIs have been given greater operational flexibility in terms of

<sup>10</sup> The calculation of outstanding stock of G-Secs under the MTF has been adjusted, considering that all existing FPI investments in the specified securities are to be reckoned under the Fully Accessible Route.

instrument choices besides exemptions from certain regulatory requirements. The aggregate investment limit was fixed at ₹40,000 crore for VRR-Government and ₹35,000 crore for VRR-Corporates. Initially, investments in debt instruments under the VRR were offered for allotment on ‘tap’ during March 11-April 30, 2019. The scheme was revised on May 24, 2019 and a separate category, viz., VRR-combined was introduced. An amount of ₹75,000 crore was offered for investment under VRR in two tranches and investment under this route stood at around ₹54,300 crore as on December 31, 2019. The guidelines relating to investment under the VRR were revised again to provide more operational flexibility to investors. The revised VRR scheme has been kept open for allotment from January 24, 2020 and is available on tap till the limit if fully exhausted.

**2.22** In terms of these guidelines, it was stipulated that the FPIs shall invest at least 75 per cent of their ‘Committed Portfolio Size (CPS)’ within three months from the date of allotment. In view of the disruptions caused by COVID-19, it was decided on May 22, 2020 to allow FPIs that have been allotted investment limits, between January 24, 2020 (the date of reopening of allotment of investment limits) and April 30, 2020, an additional time of three months to invest 75 per cent of their CPS. For FPIs availing the additional time, the retention period for the investments (committed by them at the time of allotment of investment limit) would be reset to commence from the date that the FPI invests 75 per cent of CPS.

**2.23** In addition to the above-mentioned amendments in the VRR, the short-term investment limit of an FPI has been increased from 20 per cent to 30 per cent of the total investment of that FPI in either Central Government Securities (including Treasury Bills) or State Development Loans.

### **Fully Accessible Route**

**2.24** In the Union Budget 2020-21, it was announced that certain specified categories of Central Government securities would be opened fully for non-resident investors without any restrictions, apart from being available to domestic investors as well. Accordingly, a separate channel called Fully Accessible Route (FAR) was introduced by the Reserve Bank of India in consultation with the Government on March 30, 2020 to enable non-residents to invest in specified Government of India dated securities. Non-resident investors (FPIs, Non-Resident Indians (NRIs), Overseas Citizens of India (OCIs) and other entities) can invest in specified Government securities without being subject to any investment ceilings. The specified securities as notified by RBI are as follows:

**Table 2.12 Specified Securities under the Fully Accessible Route with effect from April 1, 2020**

S. No.	ISIN	Security
1	IN0020190396	6.18% GS 2024
2	IN0020180488	7.32% GS 2024
3	IN0020190362	6.45% GS 2029
4	IN0020180454	7.26% GS 2029
5	IN0020190032	7.72% GS 2049

*Source: RBI*

**2.25** In addition, all new issuances of Government securities of 5-year, 10-year and 30-year tenor from the financial year 2020-21 have also been made eligible for investment under the FAR as ‘specified securities’. The amount invested in the Fully Accessible Route by Non-resident investors so far has been tabulated as follows.

**Table 2.13: Investment under Fully Accessible Route (FAR)**

### Treasury Bills

**2.26** Treasury Bills (T-Bills) are discounted instruments which are issued to manage short-term cash flow mismatches of the Central Government. They also provide short-term investment avenues to the market and play the role of money market benchmarks. Central Government currently issues T-Bills of tenor of 91, 182 and 364 days. The Central Government has started auctioning all 3 tenor T-bills (91D/ 182D/ 364D) every week w.e.f. October 4, 2017. The amount of T-Bills for weekly auction is notified in indicative quarterly calendar, which is announced before the beginning of each quarter.

**2.27** Generally, T-Bills, on a net basis, have a marginal contribution in financing of GFD. However, a sizeable amount was raised through T-bills in the FY21 to spread the additional borrowing across different components. Total outstanding stock of T-Bills accounted for 6.6 per cent of Public Debt, 5.9 per cent of net total liabilities and 3.5 per cent of GDP at end-March 2021 (**Table 2.14**).

**Table 2.14: Outstanding Stock of Treasury Bills**

**Cash Management Bills**

**2.28** During 2009-10, a new short-term borrowing instrument, known as Cash Management Bill (CMB) was introduced to meet unanticipated cash flow mismatches of the Central Government. CMBs are non-standard, discounted Treasury Bills issued with a maturity of less than 91 days. They have the generic character of Treasury Bills as these are issued at a discount and redeemed at face value on maturity. The tenor, notified amount and date of issue of this instrument depends upon the cash requirements of the Government. CMBs were first issued on May 12, 2010. They are issued at a short notice and investment in these instruments is recognised as an eligible investment for SLR purpose under Section 24 of the Banking Regulation Act, 1949.

**2.29** CMBs amounting to an aggregate amount of ₹10,000 crore were issued during 2014-15. While the issuance of CMBs was nil during 2012-13 and 2015-16, the Central Government raised ₹32,000 crore and ₹1,50,000 crore through CMBs during 2016-17 and 2017-18 respectively (**Table 2.15 (A)**). This further increased to ₹1,90,000 crore in 2018-19 and ₹3,00,000 crore in 2019-20. In 2020-21, ₹80,000 crore was raised through CMBs, however the same was redeemed during the year. Details of CMBs issued during 2020-21 are given in **Table 2.15 (B)**.

## **NON-MARKETABLE DEBT**

### **14-Day Intermediate Treasury Bills**

**2.30** 14-day Intermediate Treasury Bills (ITBs) are non-marketable instruments issued to the State Governments (and select Central Banks) to enable them to deploy their short-term surplus cash at a fixed interest rate. The surplus cash balance of State Governments is automatically invested in these instruments. Conversely, a negative cash position of a State Government is financed first by rediscounting existing investment in these instruments. From January 30, 2017 onwards, implicit yield payable on 14-day ITBs has been linked to Reverse Repo rate announced by RBI and has been set at Reverse Repo rate minus 200 basis points, subject to an upper ceiling of 5 per cent. The bills can be rediscounted at Reverse Repo minus 150 basis points subject to an upper ceiling of 5.5 per cent.

**2.31** Investments in 14-day ITBs mirror the accumulation of cash surpluses with States over the years. The outstanding stock of investment by State Governments in 14-day T-Bills increased from ₹1,54,176 crore at end-March 2020 to ₹2,04,746 crore at end-March 2021. The investments under these bills varies substantially during the month. The total amount outstanding under ITBs and investments of State Governments in these bills are shown in **Table 2.16**.

**Table 2.16: Investment by State Governments in 14-day ITBs**

### **Securities issued to International Financial Institutions**

**2.32** These securities are issued to International Monetary Fund, International Bank for Reconstruction and Development, International Development Association, Asian Development Bank, African Development Fund & Bank and International Fund for Agricultural Development. These special securities are issued primarily towards India's subscriptions/contributions to these institutions and certain transactions involving use of Special Drawing Rights (SDRs).

**2.33** These liabilities are non-interest bearing in nature. The total outstanding value of these rupee securities issued to international financial institutions as at end-March 2021 was ₹99,138 crore or 0.5 per

cent of GDP as compared to ₹1,01,909 crore as at end-March 2020. They accounted for 0.9 per cent of Public Debt and 0.8 per cent of net total liabilities of the Central Government as at end-March 2021.

### **Compensation and other Bonds**

**2.34** This category includes various types of special purpose bonds such as Relief Bonds, Saving Bonds, bonds issued under Sovereign Gold Bond/Gold Monetisation Schemes by the Central Government, etc. These bonds carry fixed rates of interest and are generally launched for retail subscription. The outstanding amount under this head stood at ₹1,04,267 crore at the end of March 2021 (₹67,285 crore at end-March 2020), accounting for 0.5 per cent of GDP and 1 per cent of Public Debt.

**2.35** Sovereign Gold Bond (SGBs) is a Government security denominated in grams of gold. SGBs were launched in November 2015 to migrate investment from physical gold to paper gold. One of the major objectives behind launching the scheme was to reduce the pressure on Current Account Deficit and the Rupee, arising partly from heavy imports of gold and consequent forex outflows. The product is targeted at retail investors who generally prefer to invest their savings in physical gold. The investors are required to invest in gold bonds at the prevailing price, as notified by the Indian Bullion and Jewellers Association and redemption is at the prevailing gold price on the date of maturity. There are limits placed on the maximum investment that can be made by the retail and other investors who are allowed to invest in these bonds. The tenure of these bonds is eight years, with provisions of premature redemption. The investors are also paid interest on the amount invested at 2.50 percent per annum (with effect from 2016-17, Series III), payable semi-annually. The total outstanding amount under SGB scheme was ₹25,690.02 crore at end-March 2021.

### **Securities issued against small savings (National Small Savings Fund)**

**2.36** Since April 1999, all collections under small savings schemes are credited to the National Small Savings Fund (NSSF), established in the Public Account of India. The outstanding investments of NSSF in Central Government Special Securities, which are part of Public Debt, fall in three categories, Category I comprises securities which were issued on April 1, 1999 against the outstanding balances under various small savings schemes at the close of March 31, 1999. Category II includes Special Central Government securities issued against net collections in the Fund from April 1, 1999 onwards and Category III comprises Central Government Special securities issued against the sums received on redemption of old securities.

**2.37** Accumulated liabilities at the inception of NSSF (₹1,76,221 crore) were taken over by the Central Government, of which ₹64,569 crore (Category I) was outstanding as at end-March 2021. All withdrawals as well as interest payments are made out of the accumulations in this Fund. Pursuant to the recommendation of the Fourteenth Finance Commission, most states (except for Madhya Pradesh, Kerala, Arunachal Pradesh and Delhi) have opted out from the investment operations of the NSSF, which has increased the availability of funds to the Central Government for the purpose of financing its GFD. As mentioned in para 1.5 of **Chapter I**, the borrowings of the Central Government from the NSSF through issuance of Special Securities are part of Public Debt.

**2.38** At end-March 2021, the outstanding liability of the Central Government to NSSF was ₹13,32,652 crore amounting to 12.7 per cent of public debt, 6.7 per cent of GDP and 11.4 per cent of

net total liabilities. Outstanding amount of Special Central Government securities issued against net collections from April 1, 1999 was ₹7,86,856 crore (Category II) while the outstanding amount of Central Government Special securities issued against redemption stood at ₹4,81,227 crore (Category III) at end-March 2021. The details of these Special Securities issued over the years with applicable interest rates are given in **Annex VI**. The interest rates on various small saving schemes are provided in **Annex VII**.

**2.39 Postal Life Insurance:** Government issued Special Securities to Directorate of Postal Life Insurance with a view to convert part of the frozen corpus of Post Office Life Insurance Fund (POLIF) and Rural Post Life Insurance Fund (RPOLIF) into market-linked dated securities. Securities worth ₹4,000 crore, ₹7,000 crore and ₹9,893.7 crore were issued in 2010-11, 2011-12 and 2012-13, respectively. The total outstanding amount of these special securities was at ₹20,894 crore at end-March 2021. The liabilities, which were earlier reported under the Public Account in the Union Budgets, have become part of Public Debt. The securities issued in 2010-11 matured in 2020-21 and a new security of equal amount, i.e., ₹ 4,000 crore was issued in 2020-21, keeping the outstanding at the same level.

**2.40 Issuance of Special Securities to public sector banks/ EXIM Bank/IDBI Bank/IIFCL:** Special non-transferable securities amounting to ₹20,000.60 crore were issued to public sector banks/EXIM Bank/IDBI Bank/IIFCL towards their recapitalization in 2020-21. Total outstanding amount of these securities stood at ₹2,86,348 crore at end-March 2021.

## EXTERNAL DEBT

**2.41** Under Article 292 of the Constitution of India, the Central Government may borrow from within as well as outside the territory of the country.<sup>11</sup> External debt at current exchange rates stood at 5.3 per cent of the Central Government's net total liabilities and 5.8 per cent of Public debt at end-March 2021. The trends in external debt at book value and current exchange rate are shown in **Table 2.17** and detailed in **Annex HB-4**.

**Table 2.17: Trends in External Debt**

(in ₹crore)

Components	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21

\* Exchange Rate as on 31st March of the respective years.

\*\* The external debt at current exchange rate does not include net cumulative Special Drawing Rights (SDRs) allocations by the IMF.

**2.42** External debt (at current exchange rate) as percentage of GDP worked out to be 3.1 per cent in 2020-21. This is indicative of low currency risk of debt portfolio of the Central Government.

<sup>11</sup> Executive power of State Governments extends only to borrowing within the territory of India as per Article 293 of the Constitution.

**2.43** Additionally, a major portion of external debt is financed by multilateral institutions (67.6 per cent of total external debt at end-March 2021), while bilateral sources account for the remaining 32.4 per cent (**Table 2.18**). Loans from multilateral institutions are long-term and largely on concessional terms, further lowering the risk from external borrowings of the Central Government. Agency-wise details of outstanding external loans from 2003-04 onwards are shown in **Annex HB-3**.

**2.45** To summarise the Chapter, over the years, Public Debt as a percentage of GDP moved in a narrow range. However, it went up sharply during the year under review due to additional borrowing resorted to by the Government in view of severe impact of Covid 19 on Indian economy and Government finances. The emphasis of debt management strategy continues to be on the use of market-based borrowing instruments for the purpose of financing of GFD though the share of non-marketable sources is also going up due to the reasons mentioned above. At end-March 2021, 74.7 per cent of the outstanding Public Debt was held in marketable debt instruments. Internal debt constitutes a major part of Public Debt and within the internal debt, fixed coupon dated securities constitute a major portion. Maturity profile of outstanding dated securities indicates a relatively low roll-over risk in the debt portfolio. The weighted average yield of primary issuance of dated securities softened in 2020-21 and the weighted average maturity on outstanding stock of dated securities increased to 11.31 years at end-March 2021 from 10.72 years at end-March 2020. The ownership pattern indicates a broad-based investor base with commercial banks and insurance companies being the predominant investor categories. Launching of Retail Direct Scheme by RBI during the year is expected to further widen the investor base in coming years. The share of external debt, comprising long-term loans from multilateral and bilateral sources, in the total Public Debt has continued to remain low over the years.

## CHAPTER III

### PUBLIC ACCOUNT LIABILITIES - CENTRAL GOVERNMENT

All public money received by or on behalf of the Government of India, other than those for credit to the Consolidated Fund of India, are credited to the Public Account of India<sup>12</sup>. The receipts into the Public Account and disbursements out of it are generally not subjected to vote by the Parliament. Receipts under Public Account include NSSF<sup>13</sup>, Provident Fund contributions of Central Government employees, security deposits and other deposits received by the Government, securities issued in lieu of oil/food/fertilizer subsidies, etc. In the case of Public Account Liabilities, the Government acts as a Banker or Trustee and refunds the money on demand after completion of the implicit contract/event. The details of Public Account Liabilities of the Central Government are presented in **Table 3.1**.

**Table 3.1: Public Account Liabilities of the Central Government**

<sup>12</sup> Clause (2) of Article 266 of the Constitution of India.

<sup>13</sup> The gap between total liabilities in respect of small saving collections and investments of NSSF is shown under this head.

**3.2** Public Account liabilities stood at ₹ 12.7 lakh crore at end-March 2021, accounting for 10.9 per cent of net total liabilities. The share of public account liabilities in total liabilities has exhibited a steady decline since 2014-15 except the year 2019-20. The major categories under this head are discussed below.

#### A. National Small Savings Fund (NSSF)

**3.3** The gap between total liabilities and investments of NSSF is the net liability of the Central Government towards NSSF in public account. The investment of NSSF includes Special Securities issued to NSSF by the Central Government, State Governments and investments of NSSF in public agencies. Trends in liabilities and investments of NSSF are given in **Table 3.2**.

**Table 3.2: Liabilities and Investments of NSSF**

Components	(in ₹ crore)						
	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21
1	2	3	4	5	6	7	8
1. Total Liabilities of NSSF	908286	1015225	1132490	1289604	1501608	1781883	2087447
2. Investment of NSSF	806390	884905	989943	1153165	1351761	1655903	1873794
(i) Borrowings by Centre	261391	313856	381291	483919	608919	848919	1332652
(ii) Borrowings by States	543499	571049	538651	507245	471206	440438	415506
(iii) Loan to IIFCL/ Public Agencies	1500	0	70000	162000	271636	366546	125636#
3. Net Liabilities (1-2)	101896	130320	142547	136439	149847	125980	213653
4. Total Liabilities of NSSF as % of GDP	7.3	7.4	7.4	7.5	8.0	8.8	10.6
5. Net Liabilities of NSSF as % of GDP	0.8	0.9	0.9	0.8	0.8	0.6	1.1

#a part of these loans are fully serviced by the GoI, as explained in Chapter 1.

#### B. State Provident Funds

**3.4** The share of accumulated Provident Fund contributions of Central Government employees under the head ‘State Provident Funds’ in net total liabilities was marginally lower at 2.1 per cent in 2020-21 (**Table 3.3**).

**Table 3.3: State Provident Funds**

Components	(in ₹ crore)							
	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21
1	2	3	4	5	6	7	8	
State Provident Funds	143425	155334	167193	184938	200737	216795	228430	246944
Percentage of Net Total Liabilities	2.7	2.6	2.6	2.6	2.6	2.5	2.3	2.1
Percentage of GDP	1.3	1.2	1.2	1.2	1.2	1.1	1.1	1.3

## C. Other Accounts

**3.5** ‘Other Accounts’ include sundry items such as special deposits of non-Government Provident Funds with the Central Government, securities issued in lieu of subsidies, other deposits and accounts, insurance and pension funds, postal life insurance, etc. The share of ‘Other Accounts’ in net total liabilities increased to 3.8 per cent at end-March 2021.

**3.6** Certain subsidy payments were made by the Central Government in the form of Special Securities issued to Oil Marketing Companies, Fertilizers Companies and Food Corporation of India in the past. These bonds are part of Public Account liabilities. Liabilities on account of these Special Securities had increased significantly during 2005-06 to 2008-09. Since then, these liabilities have remained almost unchanged in absolute terms, and declined as a ratio of total net liabilities (**Table 3.4**).

**Table 3.4: Special Securities issued in lieu of subsidies**

<b>Components</b>	<b>2014-15</b>	<b>2015-16</b>	<b>2016-17</b>	<b>2017-18</b>	<b>2018-19</b>	<b>2019-20</b>	<b>2020-21</b>	(in ₹ crore)
	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>
Special Securities issued (in lieu of subsidies)	162828	162828	162828	162828	162828	162828	162828	162828

iii) Fertiliser Companies	15705	15705	15705	15705	15705	15705	15705	15705
% of Net Total Liabilities	0.3	0.2	0.2	0.2	0.2	0.2	0.1	

## D. Reserve Funds and Deposits

**3.7** Reserve Funds and Deposits accounted for 2.9 per cent of total net liabilities as at end-March 2021 (3.1 per cent at end-March 2020). At end-March 2021, interest bearing liabilities under ‘Reserve Funds and Deposits’ constituted 64.5 per cent of total liabilities under this head whereas the non-interest bearing liabilities stood at 35.5 per cent.

**Table 3.5: Reserve Funds and Deposits**

<b>Components</b>	<b>2014-15</b>	<b>2015-16</b>	<b>2016-17</b>	<b>2017-18</b>	<b>2018-19</b>	<b>2019-20</b>	<b>2020-21</b>	(in ₹ crore)
	<b>1</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	
Reserve Funds and Deposits	188857	198512	208099	252758	302510	304444	333948	
Percentage of Total Liabilities	3.2	3.0	3.0	3.2	3.5	3.0	2.9	
Percentage of GDP	1.5	1.4	1.4	1.5	1.6	1.5	1.7	

## **Advances**

**3.8** Government occasionally makes advances to public and quasi-public bodies and to individuals, under special laws or for special reasons. These majorly fall in the heads of civil, defense, railway, postal and telecom. The monitoring of repayment of loans or advances is done, keeping a close watch over the repayment of principal and realization of interest.

**3.9** To summarize, the share of Public Account Liabilities in the net total liabilities of the Government had declined during 2014-15 to 2018-19 but went up in 2019-20 as some loans given to public agencies were accounted under Government liabilities as these loans are fully serviced by the Government In 2020-21, the residual liabilities in NSSF account have gone up substantially. However, their share declined in net total liabilities during this period. The share of other components of Public Account Liabilities in the net total liabilities of the Central Government has broadly remained stable in the recent years.

## CHAPTER IV

### GENERAL GOVERNMENT DEBT

General Government debt is the consolidated debt of the Central Government, State Governments and UTs with legislature. This consolidated debt position is important from the point of view of analysing sustainability of debt level of the Government sector as a whole. Central Government debt level and profile have been covered in the previous chapters. This chapter gives a brief account of the debt profile of State Governments/UTs with legislature, followed by a description of trends and composition of the General Government debt.

#### **State Government Debt<sup>14</sup>**

**4.1** The Constitution of India under Article 293(1) empowers State Governments to borrow only from domestic sources. Further, Article 293(3) of the Constitution states that, “A State may not without the consent of the Government of India raise any loan if there is still outstanding any part of a loan which has been made to the State by the Government of India or by its predecessor Government, or in respect of which a guarantee has been given by the Government of India or its predecessor Government.

#### **Financing of Fiscal Deficit – States**

**4.2** The States have their own budgets, sources of receipts and expenditure and generally run deficit budgets. The major sources of financing of the gross fiscal deficit (GFD) of the State Governments are market borrowings and loans from financial institutions. State Governments also incur liabilities in the public account through accumulations of provident fund, reserve funds, deposits, etc. The financing pattern of fiscal deficit of State Governments has exhibited a tilt towards market borrowings in the recent period. The share of net market borrowings in GFD financing of States and Union Territories increased from an average of 48.5 per cent during 2005-2010 to 67.9 per cent during 2010-2015 and further to 77.6 per cent during 2015-2020. It increased further to 77.8 per cent of GFD in 2020-21 (RE) and is budgeted to finance 85.1 per cent of GFD in 2021-22.

**4.3** Pursuant to the recommendations of the Fourteenth Finance Commission, all States/UTs, barring Madhya Pradesh, Kerala, Arunachal Pradesh and Delhi, have opted to exclude themselves from borrowings from the National Small Savings Fund with effect from April 1, 2016. With this, the contribution of NSSF in financing of GFD of states has turned negative since then and it stood at (-) 3.3 per cent of GFD in 2020-21 (RE).

**4.4** Financing through ‘Deposits and Advances’ is budgeted to decrease to 0.3 per cent of GFD in 2021-22(BE) from 3.6 per cent of GFD in 2020-21 (RE). As per the revised estimates for 2020-21, 5.5 per cent of GFD of States was financed through decrease in cash balances and withdrawal from cash balance investment account. The consolidated budget position of States for 2021-22 indicates that States’ cash balances, including cash balance in investment account will fund the GFD to the extent of 6.1 per cent (**Table 4.1**)

---

<sup>14</sup> Data on State Governments' finances has been sourced from the RBI publication, 'State Finances: A Study of Budgets of 2021-22'.

Note: Data on Union Territories (Delhi and Puducherry) included from 2017-18 onwards and of Jammu and Kashmir from 2019-20 onwards.

<sup>15</sup> While overall deficit (+) is financed through decrease in cash balance, withdrawal from Cash Balance Investment Account and increase in WMA/OD from RBI, the overall surplus (−) adds to an increase in cash balance, and addition to Cash Balance Investment Account.

## Liabilities of State Governments

**4.5** The outstanding liabilities of the State Governments have consistently registered double digit growth since 2012-13 with the exception of 2014-15. Total liabilities of State Governments increased to ₹ 61.5 lakh crore at end-March 2021 from ₹ 53.5 lakh crore at end-March 2020 and are budgeted to increase by 13 per cent to ₹ 69.5 lakh crore in 2021-22.

**Table 4.2: Outstanding Liabilities of State Governments/UTs**

Year(At end-March)	Amount (₹ Crore)	Annual Growth (in per cent)	Debt/ GSDP (in per cent)

*Source: State Finances: A Study of Budgets of 2021-22, RBI*

*Data on Union Territories (Delhi and Puducherry) included from 2017-18 onwards and on Jammu & Kashmir from 2019-20 onwards.*

**4.6** Total outstanding liabilities of State Governments as a per cent of GDP stood at 31.1 per cent as at end-March 2021 which are likely to be at 31.2 per cent at end March 2022.

**4.7** Consistent with the classification of Central Government liabilities, State Government debt is discussed under two broad categories viz., public debt and other liabilities. The component-wise liability position of State Governments is presented in **Table 4.3**, while **Table 4.4** presents the same information as a ratio to GDP. A graphical representation of the State Government liabilities is given in **Chart 4.1**.

**Chart 4.1: Liabilities of State Governments**

## Public Debt

**4.8** Public debt stood at ₹ 48.4 lakh crore at end-March 2021, accounting for 78.8 per cent of total liabilities of State Governments (24.5 per cent of GDP). The change in the financing pattern of gross fiscal deficit of the State Governments and UTs is reflected in the composition of Public Debt. While the share of market loans in total liabilities increased to 60.5 per cent at end-March 2021 (42.5 per cent at end-March 2014), the share of NSSF decreased to 6.2 per cent of total liabilities at end-March 2021 from 19.8 per cent at end-March 2014.

**4.9** Loans from the Centre accounted for only 4.1 per cent of total liabilities at end-March 2021. State Governments also take negotiated loans from banks, Life Insurance Corporation of India, General Insurance Corporation, National Bank for Agriculture & Rural Development, National Co-operative Development Corporation and other financial institutions. The share of these loans in total liabilities stood at 4.7 per cent in 2020-21 (RE) (**Table 4.3**). Increasing share of market loans as per cent of GDP in the States' liabilities is a reflection of greater recourse to market by the States to finance their fiscal deficit replacing other components of financing of GFD (**Table 4.4**).

**Table 4.4: Liability Position of State Governments and UTs**

(Per cent of GDP)

## Maturity Profile of State Development Loans (SDLs)

**4.10** The maturity profile of the outstanding stock of SDLs indicates its concentration in the maturity bucket of 6 to 10 years since the last decade (**Table 4.5**). Since 2015-16, some State

Governments have started borrowing through securities with maturity more than 10 years. However, the redemption pressure in the medium term continues to persist.

**Table 4.5: Maturity Profile of Outstanding State Development Loans**

(At end-March, in per cent)

Year	0 to 1 years	1 to 5 years	6 to 10 years	Above 10 years
2011	3.6	21.7	74.6	0.0
2012	4.1	17.9	78.0	0.0
2013	3.7	19.1	77.3	0.0

Notes: Data on UTs included from 2018-19 onwards

**4.11** State-wise details of maturity pattern of outstanding stock of SDLs are presented in **Table 4.6**. The Weighted Average Maturity (WAM) of outstanding stock of SDLs of all States was higher at 7.23 years at end-March 2021 as compared to 6.95 years at end-March 2020, reflecting the States' preference for long tenure bonds in recent years. The WAM of outstanding stock of SDLs at end-March 2021 was in the range of 4.88 years for Odisha to 15.28 years for Telangana.

**Table 4.6: State-wise details of WAM of outstanding stock of SDLs (in years)**

State	End-March 2020	End-March 2021

Source: Handbook of Statistics on Indian Economy, RBI

Note: Weighted Average Yield is based on cut-off yield/price.

**4.13** State-wise data relating to weighted average coupon on outstanding stock of SDLs shows variations across States (**Table 4.7(b)**). The weighted average yield on primary issuances of SDLs (based on the weighted average price) was at 6.52 per cent in 2020-21. The difference in WAY across States reflected the impact of interest rate environment when States raised funds through the primary issuances of SDLs. The average spread over WAY of primary issuances of Central Government securities was at 0.73 per cent in 2020-21.

**Table 4.7(b): Weighted Average Coupon (WAC)/Yield (WAY) on SDLs and Spread over WAY of Central Government Securities**

(in per cent)

### Other Liabilities

**4.14** ‘Other Liabilities’ of State Governments increased to ₹13.05 lakh crore at end-March 2021 from ₹ 12.56 lakh crore at end-March 2020. Relative to GDP, the share of ‘Other Liabilities’ stood at 6.6 per cent, 0.4 per cent higher than previous period. The share of ‘Other Liabilities’ in total liabilities declined to 21.2 per cent at end-March 2021 from 23.5 per cent at end-March 2020. The major constituent of ‘Other Liabilities’ is State Provident Funds at 43.5 per cent of other liabilities (9.2 per cent of total liabilities) at end-March 2021. ‘Deposits and Advances’ and ‘Reserve Funds’ are the other components accounting for 42.2 per cent and 13.7 per cent respectively, of ‘Other Liabilities’ at end-March 2021. Contingency Fund constituted 0.5 per cent of ‘Other Liabilities’ at end-March 2021 (**Table 4.8**).

**Table 4.8: Composition of ‘Other Liabilities’ of State Governments and UTs**

(Per cent of Total)

Components	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21 RE

<b>Other Liabilities (i to iv)</b>	<b>100.0</b>							

Source: *State Finances: A Study of Budgets of 2021-22, RBI*

Note: Data on Union Territories (Delhi and Puducherry) included from 2017-18 onwards

**4.15** State Governments as a group have exhibited a tendency to hold large cash surpluses/investments in Cash Balance Investment Account on a consistent basis while at the same time resorting to market borrowings to finance their GFD. As such, there is a negative carry in the case of cash surpluses/investments in cash balance investment account. (parked as investment in treasury bills of the Central Government). At end-March 21, total investment in treasury bills of the Central Government by State Governments increased to ₹ 2,46,523 crore from ₹ 1,88,261 crore at end-March 20. An adjustment made to this effect shows that total liabilities of State Governments could have been lower at 29.9 per cent of GDP against 31.1 per cent without adjustment, at end-March 2021 (**Table 4.9**). This factor, however, does not affect consolidated General Government Debt, as investment in treasury bills by States is an inter-Government transaction that is netted out of consolidated General Government Debt position.

**Table 4.9: State Government Debt Adjusted for Investment in Treasury Bills**

(₹ crore)

### Re-issuances of SDLs and Trading in SDLs in the secondary market

**4.16** Reflecting the increasing share of market loans in GFD financing, the share of SDLs in outstanding Government bonds (Central Government dated securities and SDLs taken together) has increased from 21.8 per cent in 2014-15 to 32.75 per cent in 2020-21. However, the increase in the share of SDLs in total outright trades from 1.8 per cent to 5.8 per cent during the same period remained significantly lower as compared to the share of G-Secs in total volume of outright trades in the secondary market (**Chart 4.2**). Nevertheless, it is expected that re-issuances of SDLs would help to improve their tradability in the secondary market. Re-issuances to elongate maturities and contain roll over risk saw a decline in 2020-21. The share of re-issuances in total issuances of SDLs decreased from 17.8 per cent in 2019-20 to 8.7 per cent in 2020-21. During 2020-21, four States raised a part of their market borrowings through the re-issuances of SDLs. However, the trend is likely to strengthen in future.

**Chart 4.2: A Comparative Picture of SDLs vis-à-vis G-Secs in Outstanding bonds and Outright Trades**

## General Government Debt

**4.17** General Government liabilities are arrived at by consolidating liabilities of the Central Government, State Governments and UTs with legislatures. General Government liabilities are divided in two broad components *viz.*, public debt and other liabilities. As General Government Debt represents the liability of the Government sector as a whole, the following inter-Government transactions are netted out to derive General Government Debt.

- (i) Investment of State Government/ UTs with legislature in treasury bills issued by the Central Government;
- (ii) Loans from the Central Government to States / UTs.

**4.18** After making these adjustments, the consolidated ‘public debt’ of the General Government worked out to ₹ 148.7 lakh crore accounting for 75.3 per cent of GDP at end-March 2021, higher than 60.5 per cent at end-March 2020. ‘Other liabilities’ in General Government debt stood at ₹ 25.8 lakh crore with a share of 13.1 per cent of GDP at end-March 2021 (12.9 per cent of GDP at end-March 2020). Total liabilities of the General Government at end-March 2021 at ₹ 173.5 lakh crore amounted to 87.8 per cent of GDP, up from 73.7 per cent of GDP at end-March 2020 (**Table 4.10**).

**Table 4.10: General Government Debt**

GDP Figures based on Provisional Estimates of National Income 2020-21 and Quarterly Estimates (Q4) of GDP 2020-21 released by NSO on 31<sup>st</sup> May 2021.

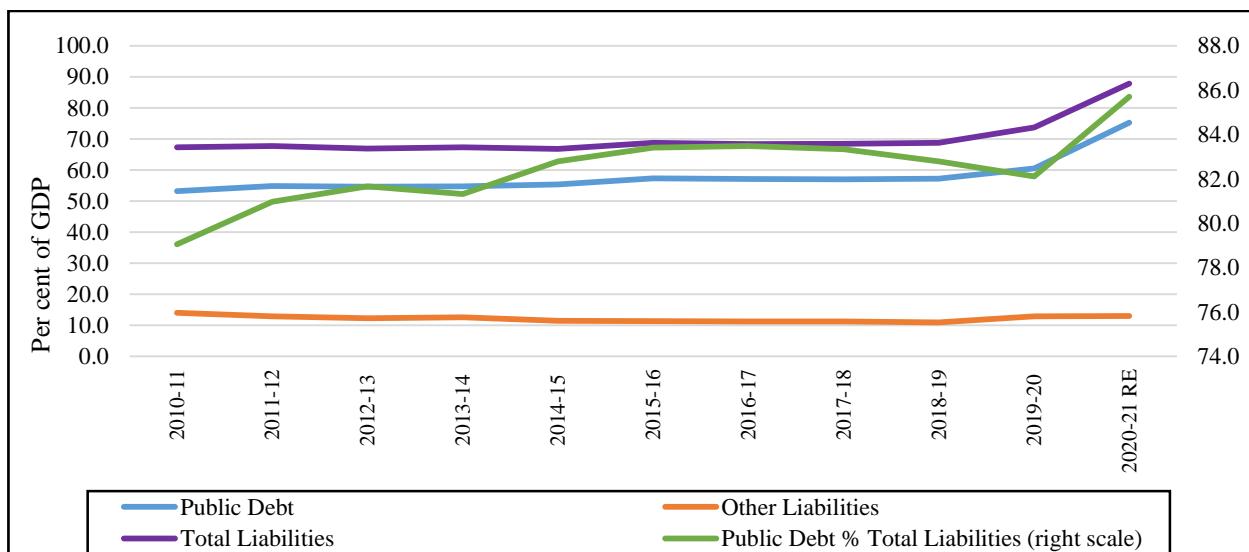

\*Figure for Public Debt of Centre is based on actuals.

<sup>^</sup>Figures from year 2015-16 onwards have been taken from the Receipts Budget.

**4.19** General Government liabilities, as per cent of GDP, have moved in a narrow range of 66.8 per cent to 68.7 per cent during 2011-12 to 2018-19 before rising to 73.7 per cent in 2019-20, which further accelerated to 87.8 per cent in 2020-21 (**Chart 4.3**). The share of General Government public debt in total liabilities has increased with a corresponding decline in the share of other liabilities. At

end-March 2021, General Government public debt accounted for 85.7 per cent of total liabilities as against 81.3 per cent at end-March 2014. The decline in the share of ‘Other Liabilities’ is attributable primarily to greater reliance on market borrowings by both, the Central and State Governments.

**Chart 4.3: Trends in General Government Debt**

*Note: Data on Union Territories (Delhi and Puducherry) included from 2017-18 onwards*

**4.20** To summarise, the debt-GDP ratio of States and Union Territories has increased to 31.1 per cent at end-March 2021 from 26.3 per cent at end-March 2020. The share of public debt increased within the overall debt portfolio of the State Governments. Within the public debt, the share of market borrowings increased while that of borrowings from the NSSF exhibited a steady decline to 6.2 per cent at end-March 2021 from a high of 24.4 per cent at end-March 2012. Taking the Central, State Governments and UTs (with legislature) together, the ratio of General Government liabilities to GDP was higher at 87.8 per cent at end-March 2021 (73.7 per cent at end-March 2020).

## CHAPTER V

### ASSESSMENT, EMERGING ISSUES AND ROAD AHEAD

This chapter provides an assessment of the debt profile of the Government in terms of cost, risk characteristics and sustainability. Sustainability of sovereign debt has always been an important indicator of overall macroeconomic health of a country. Debt sustainability is in great part a function of the level of debt and the Government's capacity to service the outstanding debt. In case of India, the Central Government debt as a percentage of GDP has declined over the medium term before rising to 49.1 per cent in 2019-20, further to 59.2 per cent in 2020-21 from 47.1 per cent in 2014-15, mainly due to Covid-19's adverse effect on Govt. receipts and expenditure. The General Government debt has also risen to 87.8 percent at the end of FY 2020-21 from 66.8 per cent at the end of FY 2014-15. The characteristics of existing debt stock of the Government (long residual maturity of dated securities, issuance of debt instruments primarily at fixed rate of interest, predominance of domestic currency denominated debt etc.), when juxtaposed against economic parameters such as high economic growth rate/domestic savings rate, put India in a better position when compared to equally or even lower indebted economies. The risk profile of India's Government debt stands out as safe and prudent in terms of accepted parameters of indicator-based approach for debt sustainability analysis (DSA) as detailed in the following paragraphs.

**5.1** Institutionally, the Government has decided to setup a statutory Public Debt Management Agency (PDMA) to bring both India's external and domestic debt under one roof. The first step towards this direction was the establishment of a Public Debt Management Cell (PDMC) within the Budget Division, Ministry of Finance in October 2016, subsuming the erstwhile Middle Office. The PDMC has been assigned certain functions in advisory capacity in respect of Central Government debt management. The PDMC has since been working as a part of Budget Division discharging its responsibilities and moving forward towards establishing a PDMA.

#### **Indicator-based Approach for Debt Sustainability Analysis of Central Government, State Governments and General Government**

##### **Maturity of Debt**

**5.2** In the absence of information regarding residual maturity on the entire debt stock of the Government, particularly regarding liabilities under Public Account, the analysis in respect of maturity of debt in this Chapter is confined primarily to the 'Public Debt'<sup>16</sup> of both Centre and States.

##### **Short-term Debt**

###### ***Central Government***

**5.3** Short-term debt of the Central Government on a residual maturity basis includes 14-day intermediate treasury bills, 91-day, 182-day and 364-day treasury bills, dated securities maturing in the ensuing one year and external debt with remaining maturity of less than one year. Short-term debt has moved in a narrow range during the period under review. It accounted for 11.4 per cent of public debt

---

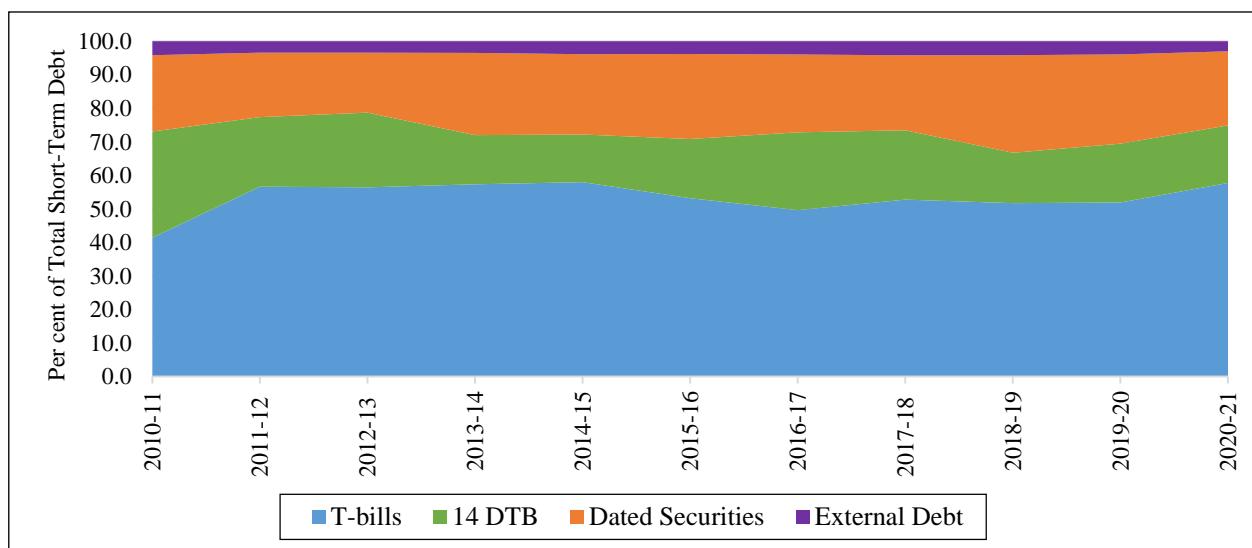

<sup>16</sup> Maturity profile is available for marketable debt, external debt, 14-day ITBs, securities issued to NSSF (excluding category I investments), special securities issued to public sector banks/ EXIM Bank/IDBI Bank/IIFCL, which together account for nearly 98.1 per cent of total public debt. Of the remaining items, securities issued to international financial institutions (0.9 per cent of public debt) and Compensation Bonds (1.0 per cent of public debt) are not significant from the roll-over risk perspective.

and 6.1 per cent of GDP at end-March 2021 (**Table 5.1**). The share of Treasury bills (other than 14-day ITBs) in total short-term debt of Central Government at end-March 2021 was the largest at 57.7 per cent, followed by dated securities at 22.1 per cent and 14-day Intermediate Treasury Bills (ITBs) at 17.2 per cent. The share of short-term external debt at 3.0 per cent remained low (**Chart 5.1**).

**Table 5.1: Short-term Debt of Central Government**

End of Fin Year	Amount (₹crore)	Per cent of Public Debt of Central Government	Per cent of GDP
1	2	3	4
2010-11	325683	11.1	4.3
2011-12	471559	13.3	5.4
2012-13	531318	13.0	5.3
2013-14	591629	12.8	5.3
2014-15	602801	11.8	4.8
2015-16	685819	12.0	5.0
2016-17	674663	11.0	4.4
2017-18	730260	10.7	4.3
2018-19	813987	10.8	4.3
2019-20	883113	10.3	4.3
2020-21	1196829	11.4	6.1

**Chart 5.1: Composition of Short-Term Debt of Central Government**

### ***State Governments /UTs***

**5.4** Short-term debt of State Governments / UTs comprises internal debt including market loans maturing within next one year, SDF/ WMA and repayment of loans to the Centre due in the ensuing year. It constituted 6.8 per cent of their Public Debt at end-March 2021 (**Table 5.2**). State Governments /UTs do not issue treasury bills. Market borrowings constitute the dominant part of Public Debt of State Governments and these are raised largely through the issuance of SDLs with 10-year maturity<sup>17</sup>. The share of short-term debt of States, on a residual maturity basis, with respect to Public Debt and GDP increased to 6.8 per cent and 1.7 per cent, respectively in 2020-21.

<sup>17</sup> Since 2012-13, State Governments have been allowed to issue securities with maturities of less than 10 years and also re-issue existing securities. A few State Governments have also started issuing SDLs with maturities of more than 10 years.

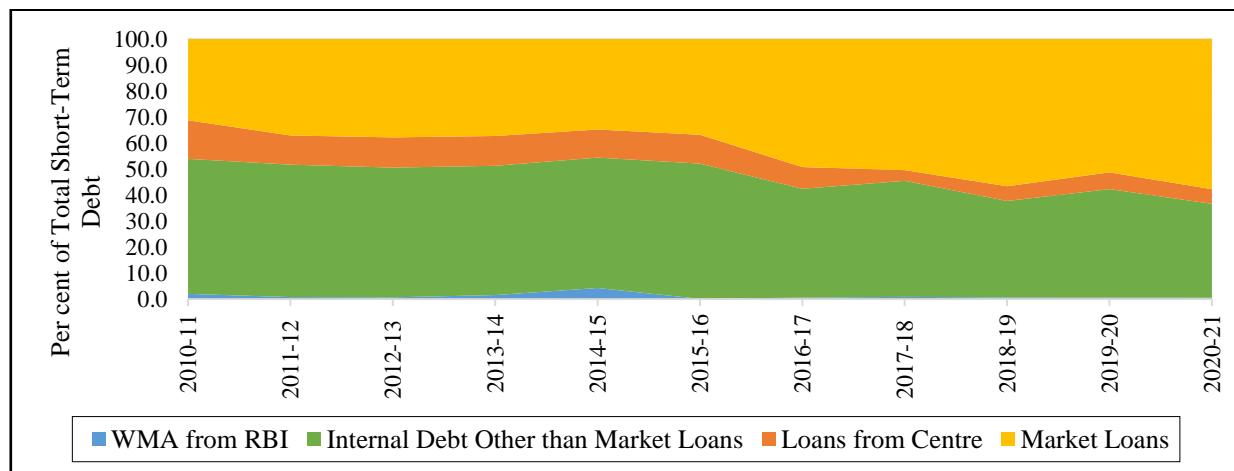

**Table 5.2: Short-term Debt of State / UTs**

<b>End- Fin Year</b>	<b>Amount (`crore)</b>	<b>Per cent of Public Debt of States / UTs</b>	<b>Per cent of GDP</b>
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>
2010-11	72917	5.3	1.0
2011-12	85134	5.7	1.0
2012-13	87617	5.3	0.9
2013-14	93804	5.2	0.8
2014-15	107341	5.2	0.9
2015-16	114568	4.6	0.8
2016-17	158372	5.3	1.0
2017-18	221148	6.7	1.3
2018-19	256892	7.1	1.4
2019-20	263532	6.3	1.3
2020-21	327612	6.8	1.7

Source: State Finances: A Study of Budgets of 2021-22, RBI

**5.5** A compositional shift has been witnessed in short-term debt of State Governments. Reflecting the impact of a gradual decline in the share of loans from the Centre in total liabilities of State Governments, the short-term debt component in the form of repayment of loans from the Centre (on a residual maturity basis) has declined over the years. The share of SDF/ WMA<sup>18</sup> from RBI in short-term debt at 0.5 per cent at end-March 2021 was also lower as compared to 2.0 per cent at end-March 2011(**Chart 5.2**).

**Chart 5.2: Composition of Short-Term Debt of States / UTs**

### **General Government Debt**

**5.6** Short-term debt of the General Government<sup>19</sup> comprises short-term debt of Central Government, States and UTs with legislature after netting out inter-Governmental debt such as States'/ UTs investment in Centre's Treasury Bills (14-day Intermediate TBs and Auction TBs) and repayment of Central Government loans by States and UTs. The share of short-term debt in public debt of General Government increased from 7.7 per cent in 2019-20 to 8.5 per cent in 2020-21(**Table 5.3**).

<sup>18</sup> Special Drawing Facility/ Ways and Means Advances, (WMA) is short-term borrowing facility made available by RBI.

<sup>19</sup> Intergovernmental debt such as treasury bills (both ITBs and ATBs) held by State Governments/ UTs with legislature and repayments of Loans by States/ UTs with legislature to Centre are netted out.

**Table 5.3: Short-term Debt of General Government**

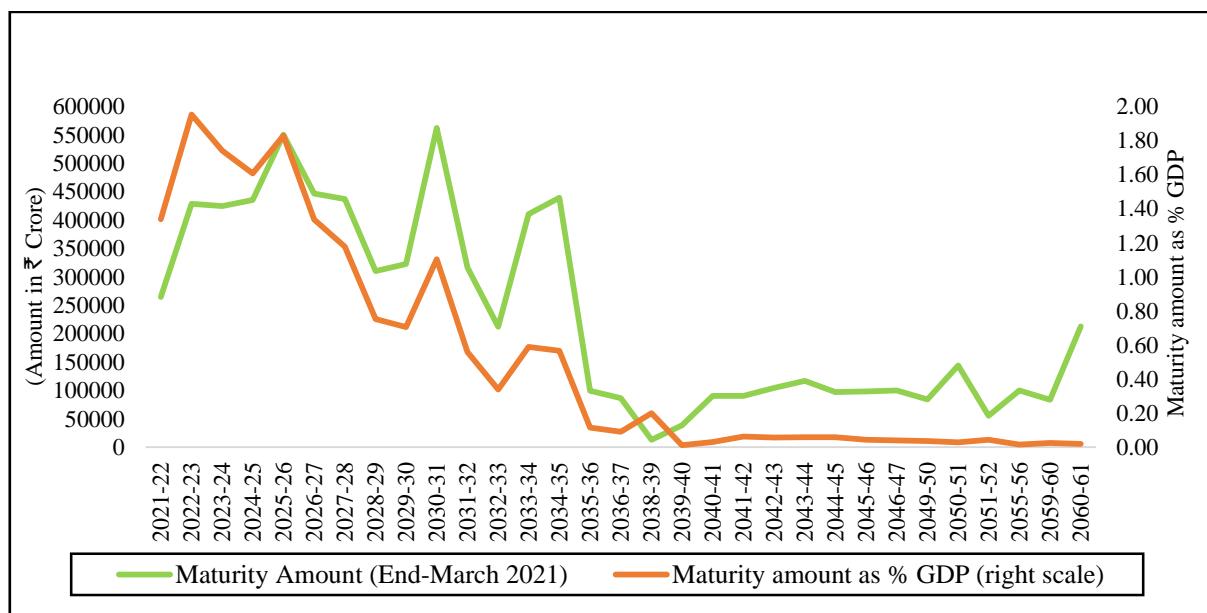

End of Fin-Year	Amount (` crore)	Per cent of General Government Public Debt	Per cent of GDP
1	2	3	4
2010-11	278401	6.8	3.6
2011-12	428562	8.9	4.9
2012-13	462165	8.5	4.6
2013-14	542301	8.8	4.8
2014-15	575018	8.3	4.6
2015-16	628899	8.0	4.6
2016-17	627249	7.1	4.1
2017-18	729453	7.5	4.3
2018-19	860401	8.0	4.6
2019-20	941855	7.7	4.6
2020-21	1259881	8.5	6.4

#### ***Annual Repayment Burden of Government of India Dated Securities***

**5.7** The annual repayment burden (ARB) of outstanding stock of dated securities issued by the Central Government at end-March 2021 is shown in **Chart 5.3**. An increase in ARB is visible from 2021-22 onwards, both in absolute terms as well as relative to estimated GDP. However, this may be viewed against the backdrop of an active debt management strategy being used by the Central Government since 2013-14 in the form of buyback and switches of shorter tenor G-Secs with longer tenor G-Secs, with an objective to spread the redemption pressure evenly and reduce the roll-over risk.

**5.8** During 2020-21, Government carried out switches worth ₹1,53,418 crore as compared to ₹1,64,803 crore in 2019-20. There were no buy-backs operations during 2018-19, 2019-20 and 2020-21. In the Budget for 2022-23, the amount of switch operations has been raised to ₹1,80,000 crore to reduce the redemption pressure in the coming years. Elongation of maturity profile of debt portfolio through large issuances of longer tenor securities is also an integral part of the strategy being used by the Government to reduce the roll-over risk.

**Chart 5.3: Maturity Profile of Central Government Dated Securities**

Note: In Chart 5.3, nominal GDP growth rate is taken as 11.1% for 2022-23 as per MTFP cum Fiscal Policy Strategy Statement of Union Budget 2021-22 and from 2023-24 onwards it has been assumed at a uniform rate of 11.1%.

## Floating Rate Debt

**5.9** Government of India debt is raised primarily at fixed coupon rates. State Governments have not yet issued any floating rate debt. At end-March 2021, outstanding floating rate debt issued domestically by the Central Government amounted to ₹3,33,113 crore constituting 3.2 per cent of Public Debt and 1.7 per cent of GDP (**Table 5.4**). A part of external debt is also contracted at floating rates. At end-March 2021, such external debt stood at ₹ 2,55,053 crore, constituting 2.4 per cent of Public Debt and 1.3 per cent of GDP. Taking both the components together, total floating rate debt worked out to be 3.0 per cent of GDP and 5.6 per cent of Central Government Public Debt at end-March 2021.

**Table 5.4: Floating Rate Debt of Central Government**

End of Fin- Year	Internal Floating Rate Debt		External Floating Rate Debt		Total Floating Rate Debt	
	Per cent of Public Debt	Per cent of GDP	Per cent of Public Debt	Per cent of GDP	Per cent of Public Debt	Per cent of GDP
	2010-11	1.5	0.6	2.4	0.9	3.8
2011-12	1.4	0.6	2.4	1.0	3.7	1.5
2012-13	1.1	0.4	2.3	0.9	3.3	1.4
2013-14	1.0	0.4	2.3	0.9	3.3	1.3
2014-15	0.8	0.3	2.3	0.9	3.1	1.3
2015-16	0.4	0.2	2.2	0.9	2.6	1.1
2016-17	1.0	0.4	2.1	0.9	3.1	1.3
2017-18	1.8	0.7	2.0	0.8	3.8	1.5
2018-19	2.3	0.9	2.1	0.8	4.4	1.8
2019-20	2.8	1.2	1.2	0.5	4.0	1.7
2020-21	3.2	1.7	2.4	1.3	5.6	3.0

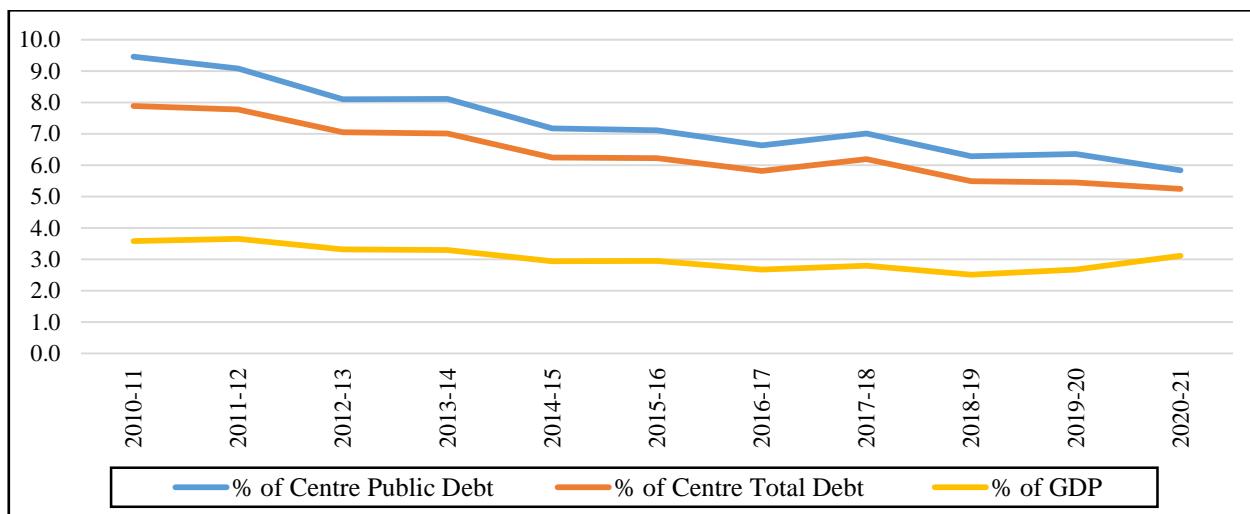

*Source: Reserve Bank of India and Aid Accounts and Audit Division, DEA, Ministry of Finance*

**5.10** The low share of floating rate debt insulates the debt portfolio from interest rate risk and imparts stability to the budget. Nevertheless, for development of the Government securities market and given the Government's responsibility to provide investors with a diverse set of instruments, floating rate bonds are being issued by the Central Government. A related instrument is the inflation indexed bond (IIB) which has a fixed real rate of interest but whose nominal interest payments vary with inflation. During 2013-14, the Government had issued IIBs for institutional investors, linked to Wholesale Price Index (WPI), and for retail investors, linked to Consumer Price Index (CPI) (called Inflation-Indexed National Saving Securities-Cumulative).

## Sources of Borrowing – Domestic and External

**5.11** As discussed earlier in the chapter on Public Debt, the Central Government debt in India is raised predominantly from domestic investors. The share of external debt has seen a gradual decline from 7.9 per cent of Central Government Debt at end-March 2011 to 5.3 per cent at end-March 2021. As per cent of GDP, external debt declined from 3.6 per cent to 3.1 per cent over the same period (**Chart 5.4**). The low share of external debt insulates the debt portfolio of the Government from currency risk.

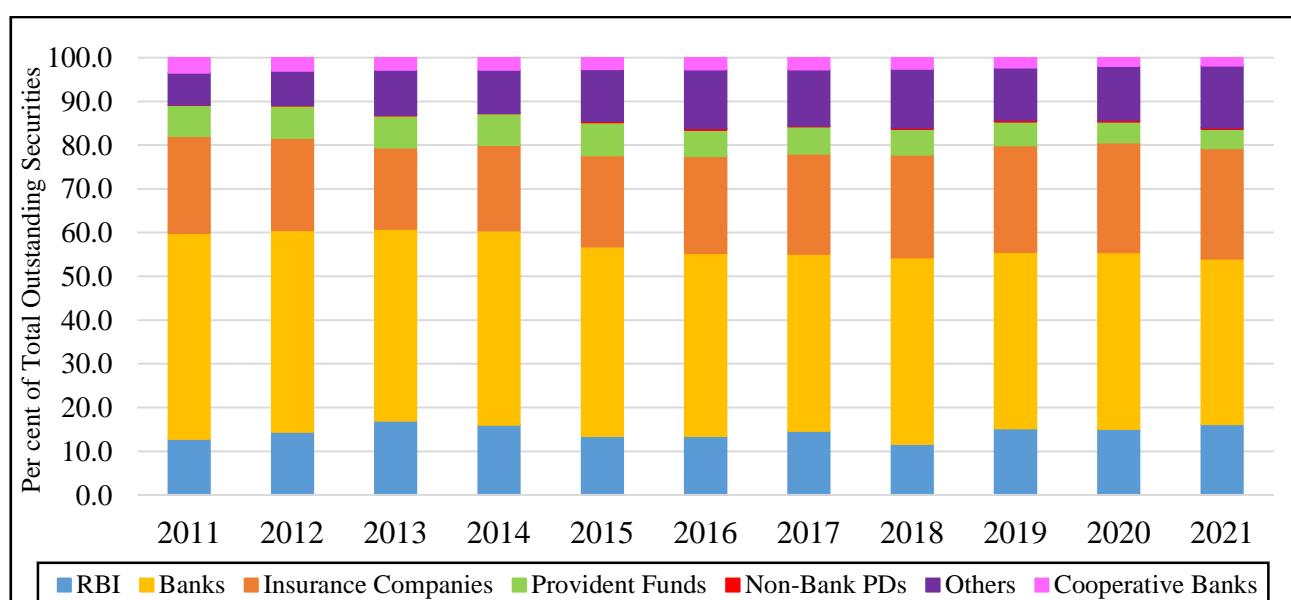

**Chart 5.4: External Debt of Central Government**

### Ownership Pattern

**5.12** Notwithstanding a decline in the share of commercial banks in outstanding stock of Central Government dated securities over the years, they have remained the largest investor class. At end-March 2021, their share stood at 37.8 per cent as compared to 47.0 per cent at end-March 2011 (**Chart 5.5**). The share of insurance companies, however, increased from 22.2 per cent at end-March 2011 to 25.3 per cent at end-March 2021 while the share of provident funds exhibited a decline from 7.1 per cent to 4.4 per cent during the same period. Since insurance companies and provident funds are long-term investors, their participation in the G-Sec market complements the Government's endeavour to lengthen the maturity profile of its debt portfolio without undue pressure on yields. The share of FPIs in Central Government securities stood at 1.9 per cent at end-March 2021 (0.9 per cent at end-March 2011 and 2.4 per cent at end-March 2020). The share of RBI increased marginally to 16.2 per cent at end-March 2021 from 15.1 per cent at end-March 2020 attributable to relatively higher amount of open market (purchase) operations undertaken by the Reserve Bank during 2020-21.

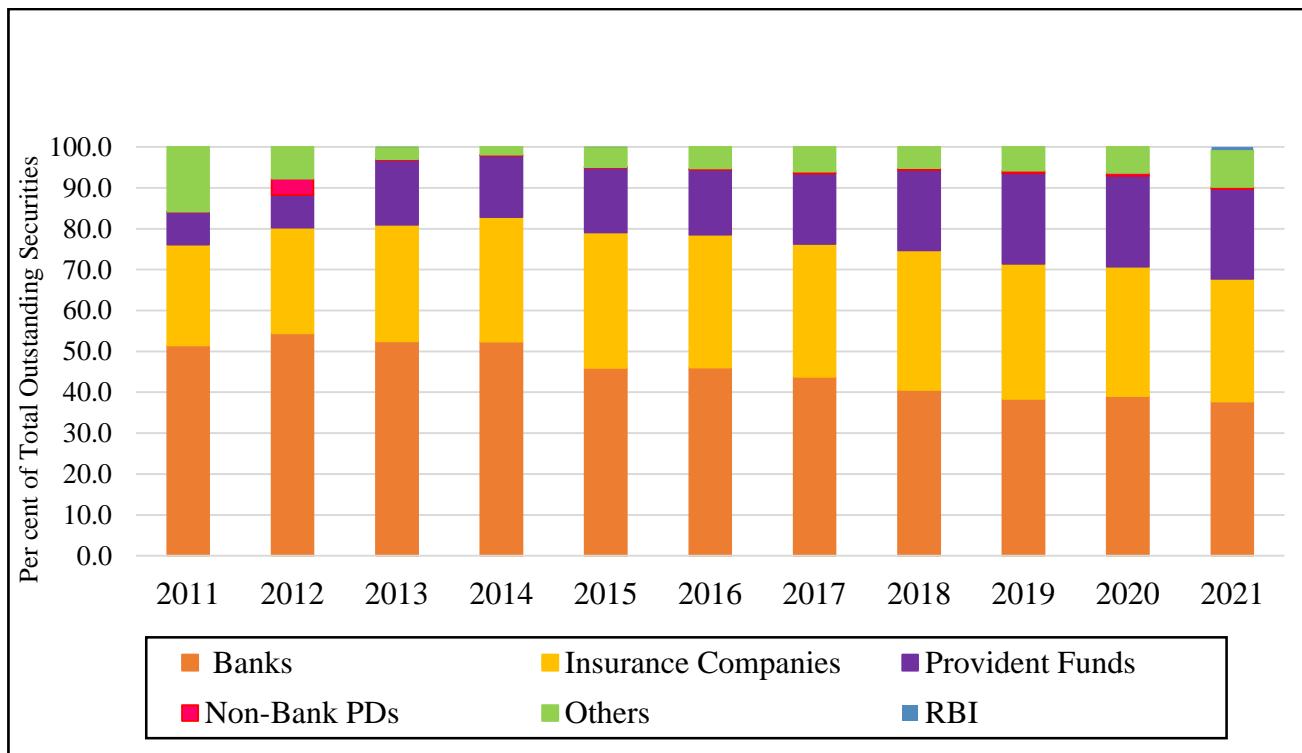

**Chart 5.5: Ownership Pattern of Central Government Dated Securities (for FY ending March)**

Source: Public Debt Statistics, RBI

**5.13** As in the case of Central Government dated securities, the State Government securities are largely held by banks (including co-operative banks) even as their share has declined from 51.4 per cent in 2011 to 37.7 per cent at end-March 2021. This reflects a diversification in the ownership pattern of State Government securities with increasing participation of insurance companies (30 per cent) and provident funds (22 per cent) (**Chart 5.6**).

**Chart 5.6: Ownership Pattern of State Government Securities (for FY ending March)**

Source: *Public Debt Statistics, RBI*.

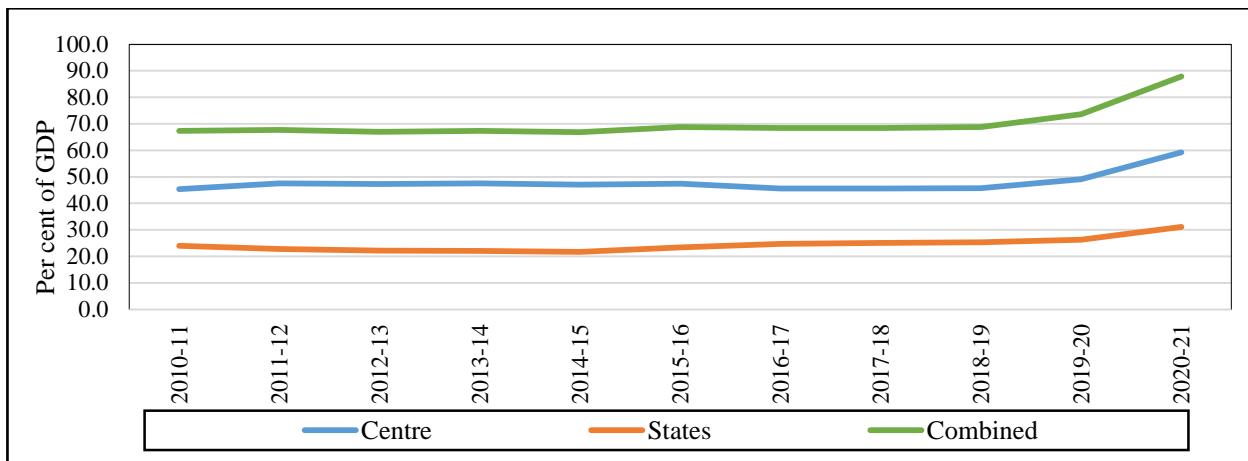

### Sustainability Indicators of Debt

**5.14** Traditionally, debt sustainability is assessed in terms of primary deficit, and interest cost relative to nominal GDP growth rate. While there is no consensus with regard to the level of debt that may be considered sustainable, a secularly rising debt-GDP ratio is considered as leading towards unsustainable debt and *vice versa*. An assessment of sustainability of Government debt, based on an indicator-based DSA approach, has been done in the following sections.

#### Debt-GDP ratio

**5.15** Debt-GDP ratio is an important indicator of medium and long-term debt sustainability of any country. The debt to GDP ratio for the Central Government increased from 49.1 per cent in 2019-20 to 59.2 per cent in 2020-21, reflecting the impact of widening of gross fiscal deficit during the year. At the State Government and UTs level, the debt-GDP ratio increased from 26.3 per cent in 2019-20 to 31.1 per cent in 2020-21. As depicted in **Chart 5.7**, the trend in General Government Debt (GGD) to GDP ratio has been broadly stable in the range of 67.4-73.7 per cent during 2010-11 to 2019-20, before rising to 87.8 per cent in 2020-21.

**Chart 5.7: Trends in Debt-GDP ratio of the Government**

**5.16** The estimates for debt-GDP ratio up to 2022-23 for the Central Government, provided in the Medium Term Fiscal Policy cum Fiscal Policy Strategy Statement, presented along with the Union Budget 2022-23, underscored the commitment to sustainable debt trajectory. However, the fiscal deficit target for RE 2021-22 was fixed at 6.9 percent of GDP and budgeted to decline to 6.4 percent of GDP in 2022-23. The stimulus led recovery of Indian economy is expected to have positive impact on economic growth and other fiscal parameters, which has resulted in the sharp downward revision of the fiscal deficit target.

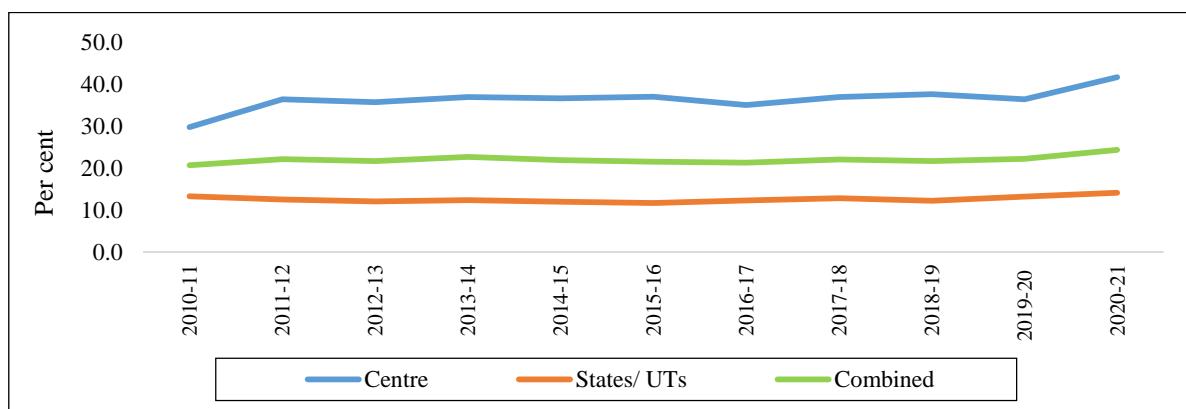

**Table 5.5: Debt-GDP Ratio (per cent) of the Central Government**

Estimates	2021-22		2022-23	
	RE	BE	RE	BE
MTFP	59.9		60.2	

### Interest Payments to Revenue Receipts

**5.17** The ratio of interest payments to revenue receipts is another crucial indicator of capacity to service debt. The ratio of interest payments to revenue receipts (IP-RR) of the Central Government has remained in the range of 35.0 per cent to 36.3 per cent during 2011-12 to 2019-20 (**Chart 5.8**). It increased to 41.6 per cent in 2020-21 due to severe fall in revenue receipts after Covid-19 hit the economy. The IP/RR ratio for States' and UTs with legislature increased from 12.5 per cent in 2011-12 to 14.1 per cent in 2020-21. The combined IP/ RR ratio of Centre and States/UTs was placed at 24.3 per cent in 2020-21 as compared to 22.0 per cent in 2011-12.

**Chart 5.8: Interest Payments to Revenue Receipts Ratio**

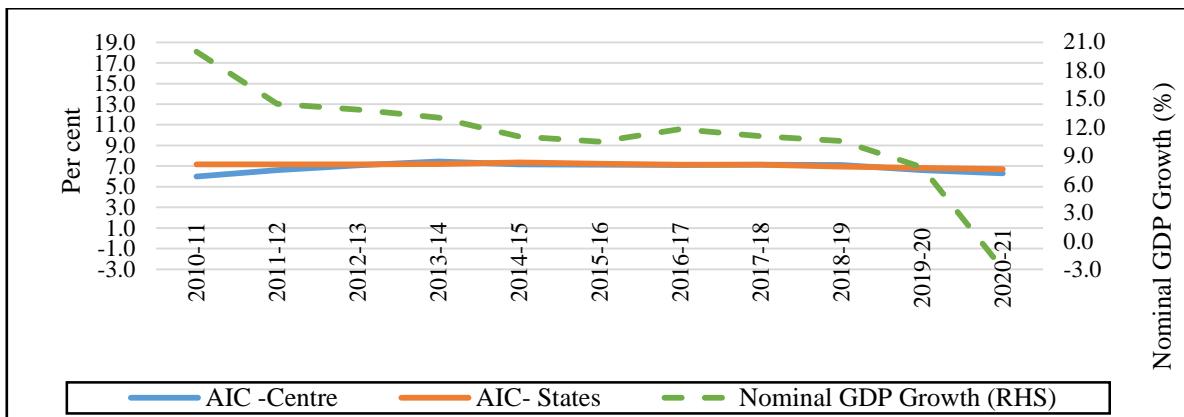

## Average Interest Cost

**5.18** Average interest cost (AIC) is arrived at by dividing interest payments during a year with average debt stock<sup>20</sup>. Centre's AIC moderated to 6.3 per cent in 2020-21 from 6.6 per cent in 2019-20. States' AIC decreased to 6.7 per cent in 2020-21 from 6.8 per cent in 2019-20 (**Chart 5.9**).

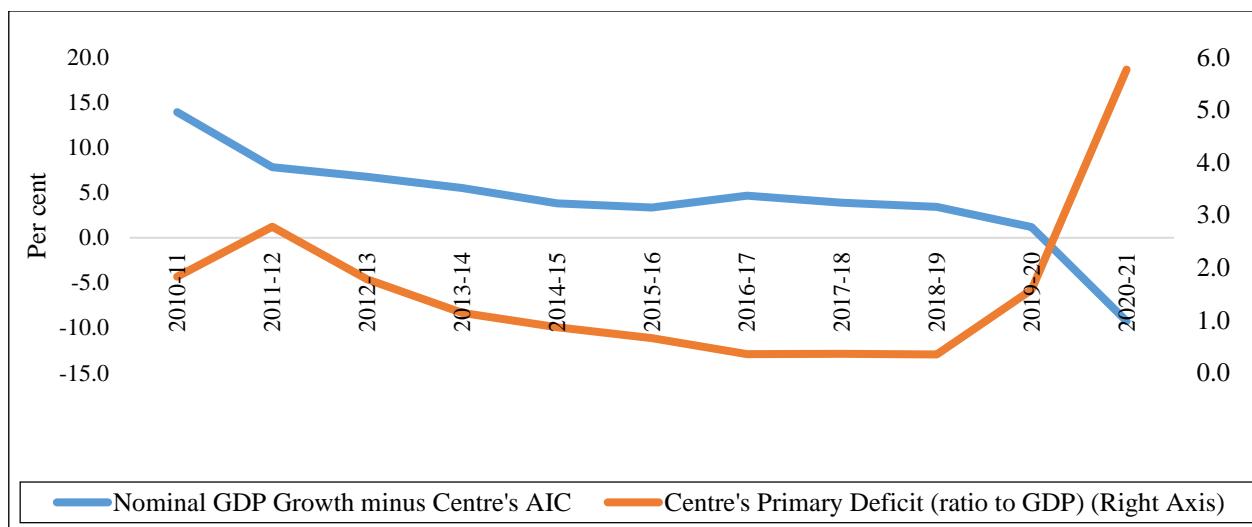

**5.19** A comparison of AIC with nominal GDP growth rate indicates that the gap between the two decreased to (-) 9.2 per cent in 2020-21 from 1.2 per cent in 2019-20 despite fall in the AIC during the same period. This was mainly due to sharp fall in GDP growth rate (nominal) by (-) 3 per cent in 2020-21.

**Chart 5.9: Average Interest Cost and Nominal GDP Growth**

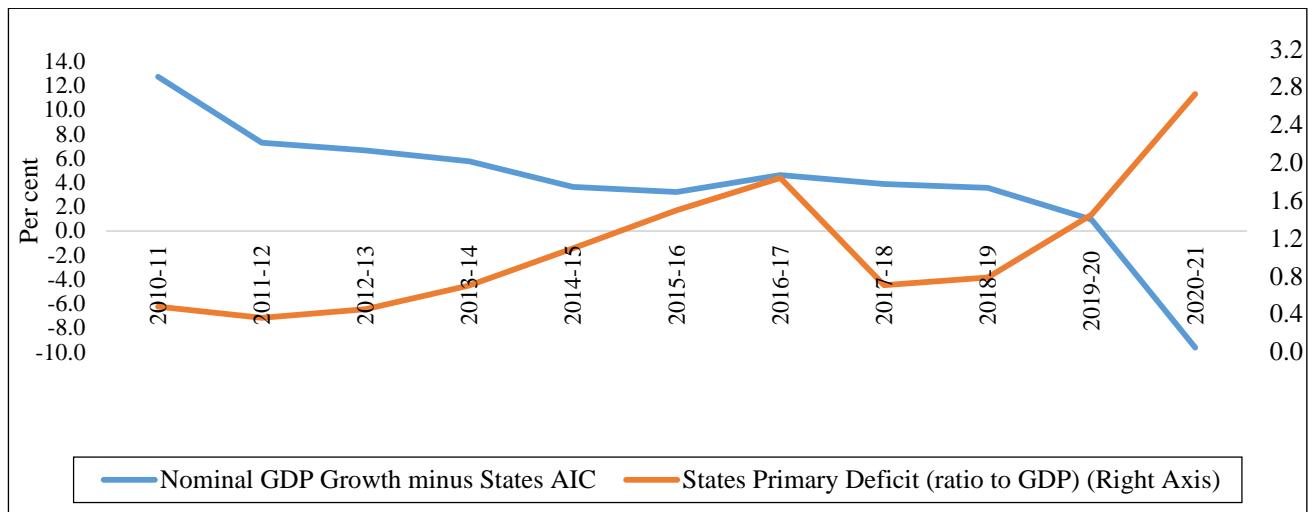

**5.20** The difference between the average interest cost and nominal GDP growth remained positive till 2019-20 for Centre's debt. However, a turnaround from this positive growth to negative growth was observed in 2020-21 owing to sharp fall in GDP growth rate in 2020-21. Similar trend was observed in case of State's debt (**Chart 5.10**).

**Chart 5.10(a): Difference between GDP growth and Centre's AIC, and Centre's Primary Deficit**

<sup>20</sup> Average debt stock is a simple average of outstanding debt at the beginning and at the end of the year.

**Chart 5.10 (b): Difference between GDP growth and State's AIC, and States' Primary Deficit**

**5.21** To sum up, the share of short-term debt in total public debt remains low. Most of the Government debt is at fixed interest rates which minimises the impact of interest rate volatility on the budget. Debt is mostly of domestic origin implying that currency risk and the susceptibility of debt portfolio to volatile international capital markets is not substantial. Deterioration in some parameters seen in FY 2020-21 is expected to be of short nature and reversal is expected in next financial year.

## **PART - II**

# **Debt Management Strategy of Central Government**

# CHAPTER I

## OBJECTIVES AND SCOPE OF DEBT MANAGEMENT STRATEGY

### **Introduction**

Public debt management plays an important role in macro-economic stability of a country. It essays a significant role in easing financing constraint for a capital scarce country as lack of capital could impede implementation of development plans. Productive use of public debt contributes to economic growth and welfare of society at large. At the same time, public debt because of its size, if not managed well, could become a source of financial instability. Thus, establishing and executing a strategy for managing Government's debt in order to raise the required amount of funds at low cost over the medium to long run, consistent with a prudent degree of risk, is essential.

**2.** Medium-Term Debt Management Strategy (MTDS) is a plan that the Government intends to implement over the medium term (three to five years) in order to achieve a composition of the Government debt portfolio that captures the Government's preferences with regard to the cost-risk trade-off<sup>21</sup>. Public debt carries risks like refinancing/roll-over risk, market risk, currency risk, creditor concentration risk and commodity price risk. MTDS provides a framework within which the debt management authorities can make informed choices on how the Government's financing requirements should be met, while taking due account of constraints and potential risks. MTDS comprising of objectives, various benchmarks and portfolio indicators along with issuance plan and alternate borrowing strategies provide requisite direction to the debt management operations. Its articulation imparts information, transparency and certainty about Government debt policy and enables investors to plan their investments.

**3.** In emerging market and developing economies (EMDEs), the Government is generally the largest borrower in its currency and remains continuously in the market. Therefore, it needs to avoid any opportunistic and time inconsistent strategy that may succeed in lowering the cost of borrowings in the short run but may end up increasing it in the long-run or enhance risks associated with debt portfolio. The transparency in Government's market borrowing operations is an important factor that determines its cost of borrowing and hence, maintaining continuous communication with the market becomes critical. The strategy also focuses on appropriate consultative process among debt management, monetary, fiscal and financial regulatory authorities to facilitate proper functioning of public debt market.

### **Objectives of Debt Management Strategy**

**4.** The main objectives of the Government debt management strategy are to ensure that the government's financing needs and payment obligations are met at the lowest possible cost, consistent with a prudent degree of risk besides supporting development of a well-functioning, vibrant, deep and

---

liquid domestic bond market. These objectives are/may be modulated so as to maintain consistency with other macroeconomic policies, including monetary policy.

### **India's approach**

**5.** Prior to the maiden release of MTDS on December 31, 2015, India's debt management strategy used to be articulated and disclosed in the Reserve Bank's Annual Report and in the Status Paper on Government Debt, released by the Ministry of Finance. In line with the international sound practices, MTDS for the Indian economy was prepared for the first time for a period of three years, *i.e.*, 2015-16 to 2017-18 and it was delineated that it will be reviewed annually and its projections will be carried forward on a rolling basis for the ensuing three years. The present document updates the MTDS which has been carried forward on a rolling basis for the ensuing three years *i.e.*, 2021-22 to 2023-24.

**6.** The organisation of the document is as follows: Chapter II provides details of various risks associated with the debt portfolio and measures undertaken to contain these risks while Chapter III covers the strategic benchmarks and implementation of MTDS. Scenario analysis which is a regular part of MTDS has not been carried out this year in view of absence of fiscal projection for the coming years, which are given in the Government Medium Term Fiscal Policy cum Fiscal Policy Strategy Statement.

### **Scope of DMS**

**7.** About 94 percent of outstanding public debt of the Government of India is domestic and within this, a very large part consists of marketable debt. Accordingly, the major focus of DMS is on active management of marketable debt of the Central Government. Small Savings Schemes run by the Government, which have started playing a major role in financing a significant portion of borrowing requirements of Government, are also now covered under DMS. Although external debt on government account is primarily negotiated bilateral and multilateral debt, certain aspects, such as tenure, currency of loan, repayment terms, etc. of external loans are also under the scope of DMS so as to borrow at the best possible terms.

## CHAPTER II

### RISK ASSESSMENT OF PUBLIC DEBT PROFILE OF CENTRAL GOVERNMENT

#### **Macroeconomic Environment**

Adaptation of economic activity to pandemic induced disruptions has enabled the global economy to do well despite subdued overall mobility. The IMF projects a stronger global economic recovery in 2021 and 2022 with global growth placed at 5.9 per cent in 2021 and 4.9 per cent in 2022. Considerable recovery is expected in 2021 for all advanced, emerging and developing economies. The growth rate for Emerging and Developing Asia is expected to accelerate to 7.2 per cent in 2021. Further, the medium term growth outlook for all economies points towards stronger than anticipated rebound in economic activity.

**Table 2.1: Overview of Growth Outlook**

Economies	April 2021			October 2021		
	2020	2021	2022	2020	2021	2022
<b>World Output</b>	<b>-3.3</b>	<b>6.0</b>	<b>4.4</b>	<b>-3.1</b>	<b>5.9</b>	<b>4.9</b>

Source: World Economic Outlook (WEO), IMF

**2.** The response of economies to global pandemic has been unprecedented with the introduction of an additional fiscal support to already existing fiscal measures introduced last year and continued accommodating stance of monetary policy. This has taken the form of liquidity support, asset purchases, credit guarantees, cash and kind transfers as well as other budgetary measures. The outbreak of the pandemic is expected to have a negative impact on the stock of sovereign debt in the near future especially for emerging market economies. Although the prevailing low interest rate regime will cover the debt service obligations to some extent, nonetheless, the reduced tax revenues will aggravate the situation.

**3.** As per the Provisional Estimates of Annual National Income, FY 2020-21 released by National Statistical Office on 31 May 2021, the growth rate of GDP at constant prices was estimated at (-)7.3 per cent in 2020-21 as compared to 4.0 per cent in 2019-20. During the First Quarter of FY 2021-22,

real Gross Domestic Product showed a growth of 20.1 per cent as opposed to contraction of 24.4 per cent in First Quarter of FY 2020-21. According to the Monetary Policy Statement 2021-22 released on December 8, 2021, the real GDP is expected to expand by 9.5 per cent in 2021-22 with substantial acceleration in the pace of vaccination and progressively improving outlook for aggregate demand.

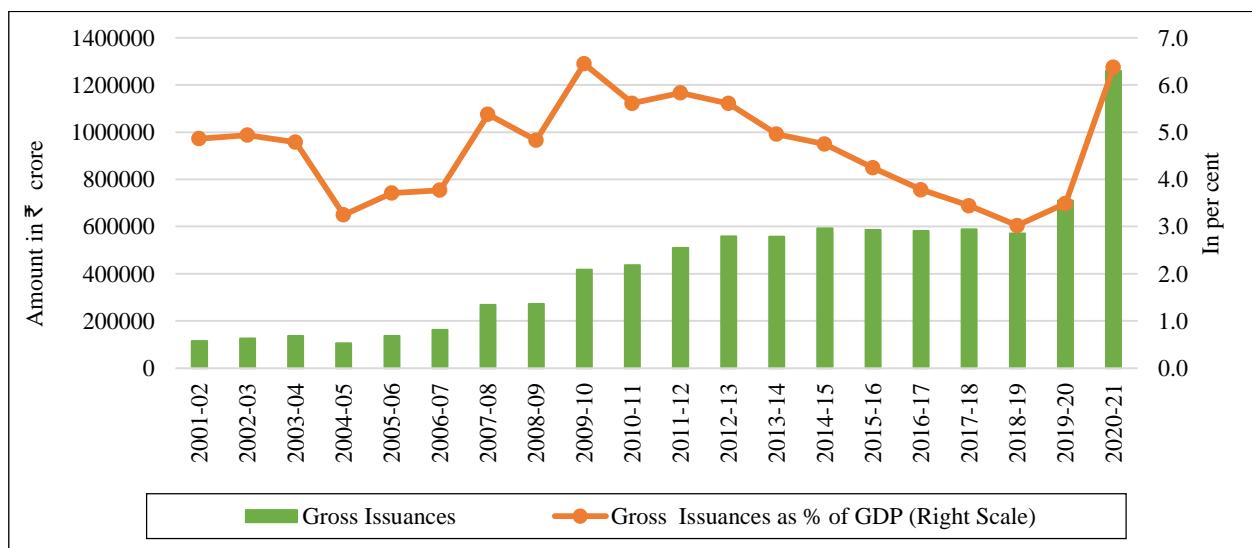

**4.** The global financial markets remained stable in 2019 only to witness pandemic induced sell-offs at the beginning 2020. The Indian rupee vis-à-vis the US dollar depreciated significantly by 4.7 per cent to ₹74.22 in 2020-21 from 70.90 in 2019-20 owing to large capital outflows. After unprecedented sell-offs in March 2020 reflecting recessionary fears among global investors at the onset of the pandemic, foreign portfolio investment (FPI) witnessed strong rebound and recorded a net inflow of USD 36.8 billion 2020-21 as compared to USD 1.4 billion in 2019-20. Global crude oil prices have hardened in 2020-21 notably since November 2020 on the back of production cuts by the OPEC and non-OPEC allies (OPEC plus) and expected revival in demand with vaccine rollouts across countries. The merchandise trade deficit declined to USD 102.6 billion in 2020-21 from USD 161.4 billion in 2019-20. Foreign exchange reserves increased during the year with robust inflows between Q1 and Q3 of 2020-21. The foreign exchange reserves stood at USD 577.0 billion as at end-March 2021.

### Central Government Liability Profile

**5.** As seen in **Chapters 1 and 2, Part I**, the liability profile of the Central Government indicates an increase in public debt by 22.9 per cent in 2020-21 in comparison to 13.5 per cent in 2019-20. The increase in total net liabilities during the same period was at 17.1 per cent as compared to 15.7 per cent rise in 2019-20. Nearly 94 per cent of the Government's public debt is raised via internal or domestic sources of financing, of which, 79.3 per cent of internal debt is raised through market-based instruments. External debt, which accounts for 5.8 per cent of public debt at end-March 2021 is raised through multilateral agencies (IDA, IBRD, ADB, etc.) and bilateral sources. Currency composition and other details of external debt have been discussed in **Chapter 2, Part I** of the Status Paper.

**6.** The gross issuance of Central Government dated securities as a per cent of GDP stood at 6.4 per cent in 2020-21 (**Chart 2.1**).

**Chart 2.1: Trends in Gross Issuances of Central Government Dated Securities**

## **Cost of Borrowings**

**7.** It is the endeavour of the debt manager to reduce cost over the medium to long-term by formulating an appropriate issuance strategy while working towards the development of the Government securities market. Steps taken to lower cost of borrowings include transparent issuance mechanism and offer of appropriate mix of instruments to cater to investors' preferences.

**8.** Transparency and predictability in borrowing plans are an integral part of the issuance strategy to achieve reduction in the borrowing cost. There is an ongoing practice in India to announce the issuance calendar for market borrowings in H1 and H2 of every fiscal year, in advance. The issuance calendar provides details of the quantum of weekly borrowings, issuances under different maturities, share of floating rate bonds in gross issuances and total borrowings for the given period. Around four days prior to the weekly auction, details of individual securities along with their issuance size are notified to the public (generally on Monday after trading hours for auction on coming Friday). Gross borrowing requirements for the year are distributed under different maturities, depending upon the Government borrowing strategy and market appetite. Borrowings are generally made as per the indicative calendar thereby reducing uncertainty for the market participants. Auction results are declared in two stages. Initially, the cut-off arrived at is notified to the public followed by full auction results giving total amount raised by the Government under both segments, competitive and non-competitive, along with details of devolvement on primary dealers, if any. This also helps in maintaining information symmetry.

**9.** The practice of sharing information about market borrowings has not only enhanced transparency of debt management operations but also ensured a successful borrowing programme that helps to raise funds in a non-disruptive manner and at a reasonable cost. This further leads to cost effectiveness by giving sufficient time to market players to plan their investments. Implications of large amounts becoming due for redemption on a single day and also in a year are also kept in view while planning the issuances of dated securities. Limits on issuances under an individual security and all securities maturing in a financial year in future are reviewed on an ongoing basis. To prevent any interest rate arbitrage in different maturity buckets, the Government also exercises the Green Shoe option. During 2020-21, the limit of Green Shoe option was kept at ₹2,000 crore per security/ auction and subsequently revised to ₹6,000/8000 crore per auction in 2021-22.

**10.** Proper estimation of demand in different maturities segments, planned issuances and use of appropriate instruments aid in lowering borrowing costs. In order to meet the varied demand of different investors, market borrowings are planned taking into account their investment preferences. Although the share of commercial banks has declined in recent years (from 46.9 per cent at end-March 2009 to 37.8 per cent at end-March 2021), they remain predominant investors in G-Secs. They are interested in short/ medium tenor dated securities, substantial issuances are therefore made in these tenors. Longer tenor bonds are issued keeping in view the demand from insurance companies, pension funds and provident funds.

**11.** The weighted average coupon on outstanding stock of dated securities has remained broadly stable in the range of 7.71 - 8.09 per cent in the last 10 years but was lower at 7.27 per cent at end-March 2021 due to low interest environment seen in FY 2020-21 and high issuance during the year.

The ratio of interest payments (IPs) to revenue receipts (RRs) of the Centre moved in the range of 35–37.5 per cent during 2011-12 to 2019-20 before increasing sharply to 41.6 per cent in 2020-21, mainly on account of sharp decline in revenue receipts and high borrowing undertaken in FY 2020-21.

## Risk Analysis of Central Government Debt

**12.** The risk to the debt portfolio can arise from various factors such as roll-over risk, interest rate risk, creditor-concentration risk and currency/exchange rate risk. These risks need to be identified, analysed, monitored and managed on a continuous basis to ensure that debt is sustainable.

### Roll-over Risk

**13.** The roll-over risk mainly encompasses the possibility of rolling over debt at a relatively higher cost and the failure to roll-over debt completely/ partially in extreme circumstances arising on account of fragile economic environment and/or volatility in market conditions, particularly when the amount in consideration is sufficiently large. Indicators such as the share of short-term debt to total debt, redemption profile, residual maturity and average time to maturity help to identify the roll-over risk.

**14.** In India, the roll-over risk is typically managed by elongating the maturity profile of dated securities. Further, the stipulation of limits on short-term debt issuances and on issuances of each individual security and securities maturing within a financial year is part of the operational mechanism to elongate the maturity profile. The limits are periodically reviewed taking into account the macroeconomic environment, projections of cash flows and cash management considerations of the Government.

### Short-term Debt

**15.** Short-term debt refers to the total amount of debt maturing in the next 12 months. The share of dated securities maturing in next 12 months as a percentage of the total outstanding stock of dated securities (including special securities) was at 3.69 per cent at end-March 2021. With the inclusion of T-Bills [*i.e.* the short-term securities (91D/ 182D/ 364D TBs)], the share of short-term debt in the total outstanding stock of dated securities (including special securities) and T-Bills was 12.15 per cent in 2020-21 (**Table 2.2**).

**Table 2.2: Short-term Debt of Central Government**

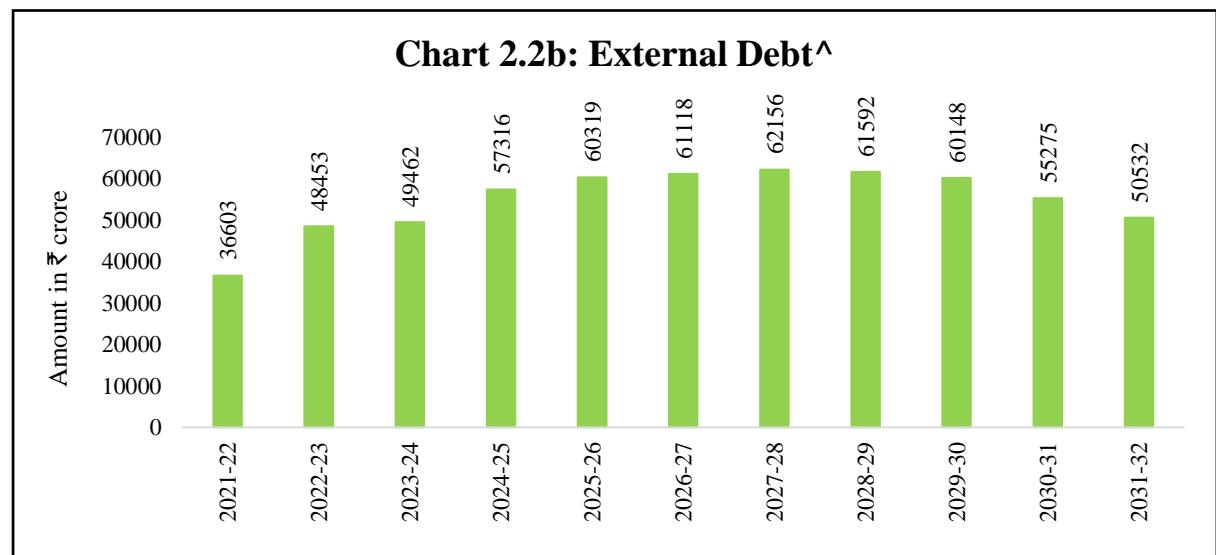

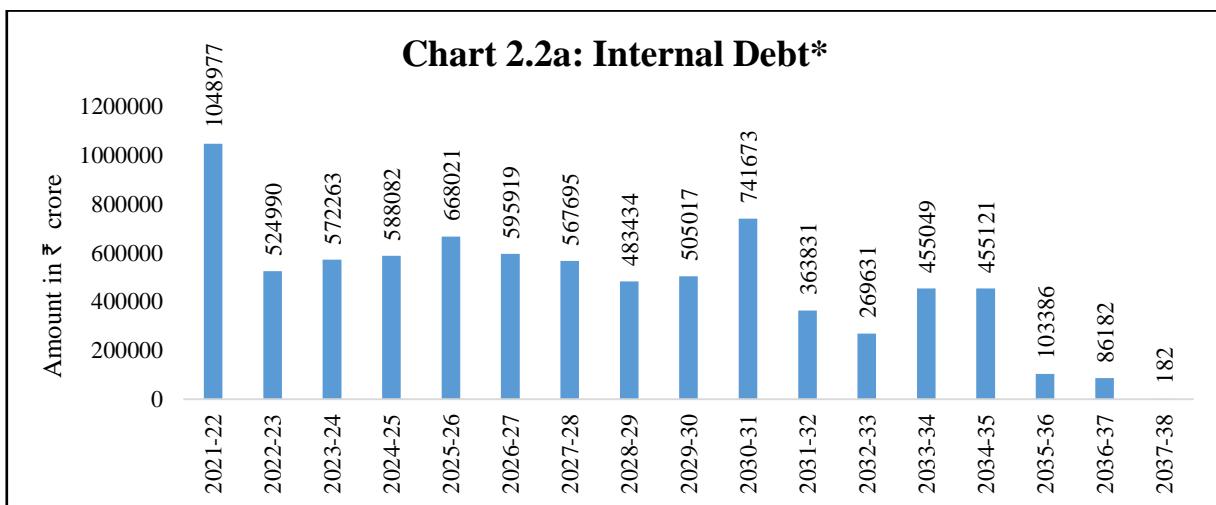

(₹crore)

Position as on March 31	Dated securities maturing in next 12 months (incl. Special Securities)	Total Outstanding dated secs (incl. Sp. Secs) as on end March 31	T-Bills O/s	Total redemption in next 12 months (incl. T-Bills)	Total Debt O/s (Dated sec. + Special sec + T-Bills)	% maturing in next 12 months (Dated. Sec + Special sec + T-Bills)
1	2	3	4	5 (2+4)	6 (3+4)	7
2011	74128	1834238	134869	208997	1969107	10.61
2012	90616	2593770	267035	357651	2860805	12.50
2013	95009	3061127	299805	394814	3360932	11.75
2014	145078	3514459	339134	484213	3853594	12.57
2015	144366	3959552	349451	493817	4309003	11.46
2016	173802	4363602	364695	538497	4728297	11.39
2017	156606	4714305	334802	491408	5049107	9.73
2018	163200	5124562	385283	548483	5509845	9.95
2019	236878	5547829	420882	657760	5968711	11.02
2020	235077	6021815	458410	693487	6480225	10.70
2021	264279	7168555	690950	955229	7859506	12.15

## **Redemption Profile**

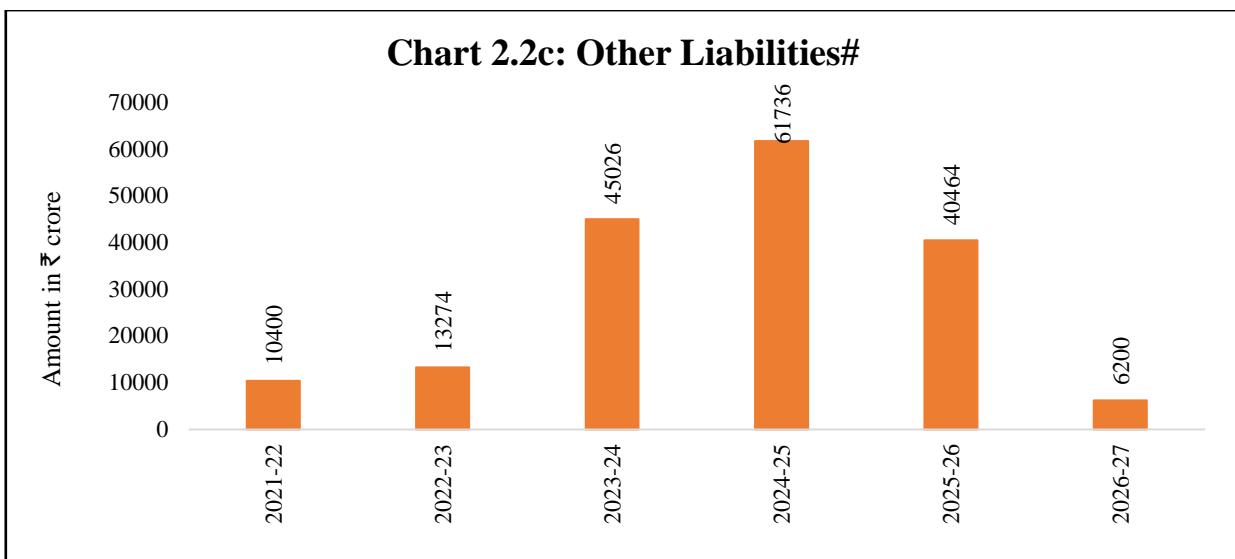

16. Redemption pattern of the Central Government's public debt and other liabilities based on the maturity profile of securities reveals that redemptions are at elevated levels, in nominal value (**Annex V** of the report and **Chart 2.2**). Maturity profile of the outstanding central government dated securities has been detailed in **para 2.11** and **table 2.4** of part I of the Status Paper. The internal debt continues to be concentrated in less than 10 years maturity bucket with a share of 66.6 per cent in total outstanding internal debt at end-March 2021. This can be attributed to large issuance of dated securities having tenor of 10 years, issuance of dated securities in 5-10 years maturity bucket from 2019-20 and NSSF securities (category III)<sup>22</sup>with a maturity of 10 years.

**Chart 2.2: Redemption Profile of Central Government's Internal Debt, External Debt and Other Liabilities**

<sup>22</sup> Category III, NSSF securities involve bullet repayment on the date of maturity.

### Chart 2.2c: Other Liabilities#

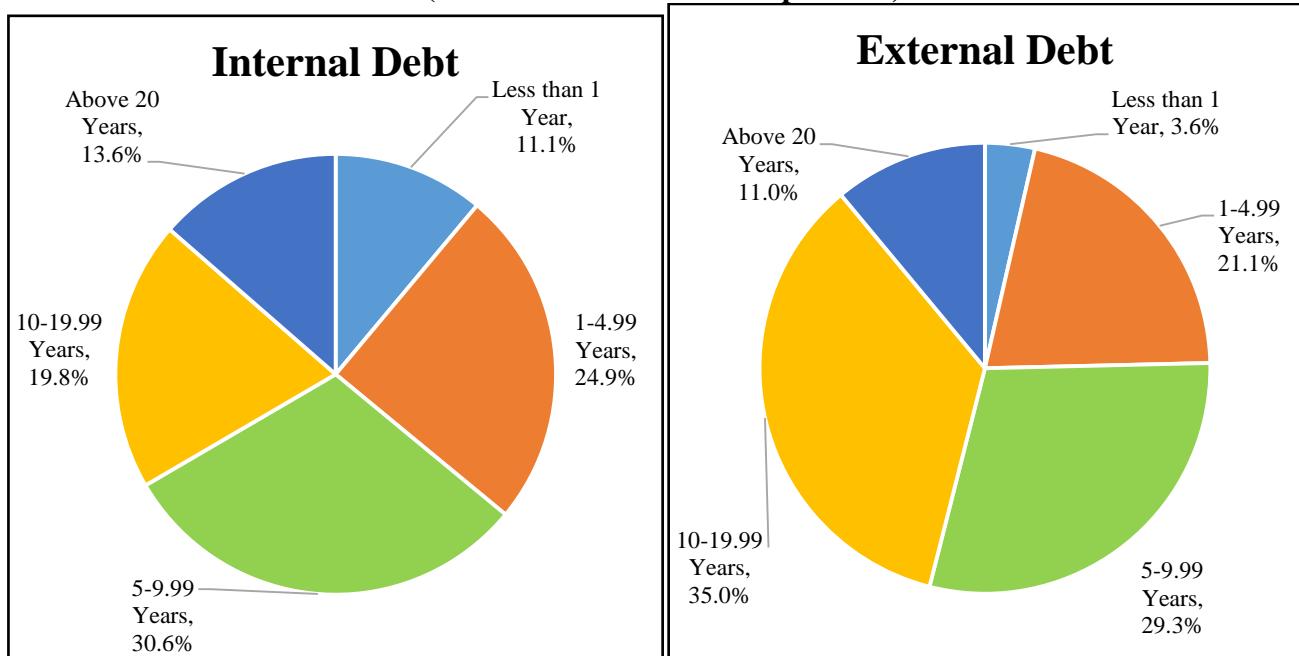

\* Including Dated securities, T-Bills (₹6,90950crore due for redemption during 2020-21) & Non-Marketable Debt (excluding compensation & bonds and securities issued to international financial institutions).

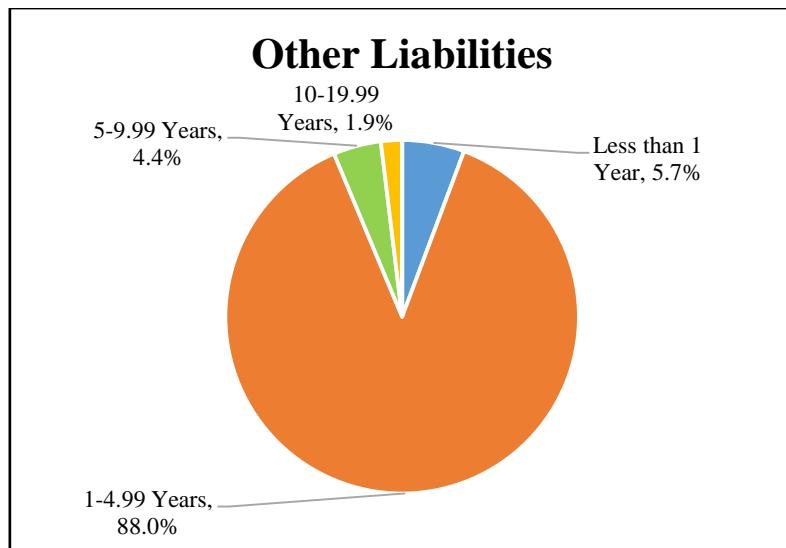

<sup>^</sup> Maturity profile also includes disbursements beyond 31<sup>st</sup> March 2021.

# Outstanding amount of Special Securities issued in *lieu* of Subsidies to PSUs (FCI, OMC and Fertiliser Companies).

**17.** A conscious strategy of elongating maturity has been adopted to reduce roll-over risk. This includes issuance of long tenor securities, non-standard tenor securities to match redemption of securities with cash flows while also undertaking switch/ buy-back operations. 69.6 per cent of total securities issued during 2020-21 were having maturity of 10 years and above. The issuance strategy will continue to focus on issuing bonds having tenor of above 20 years to cater to the needs of insurance companies and provident funds and to moderate the roll-over risk.

### Chart 2.3: Residual Maturity-wise Shares in Internal Debt, External Debt and Other Liabilities (As of end-March 2021 in per cent)

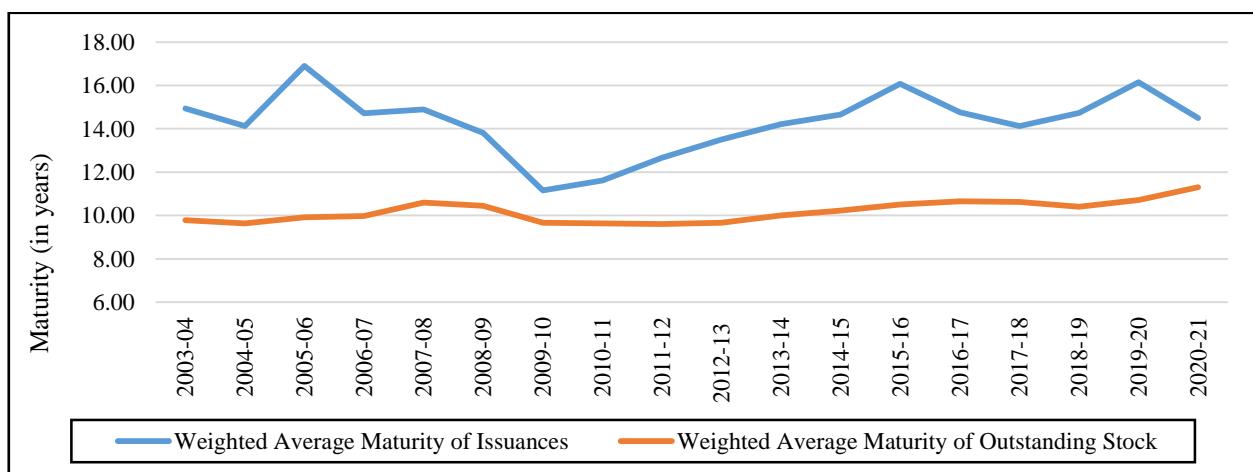

- \* Including dated securities, T-Bills, SGB & Non Marketable Debt (excluding compensation bonds, securities issued to international financial institutions and investment in Central Government Special Securities against outstanding balance as on March 31, 1999 under NSSF).
- # Outstanding amount of Special Securities issued in *lieu* of subsidies to PSUs (FCI, OMC and Fertiliser Companies).

**18.** During 2020-21, switch transactions, involving switching of short-tenor bonds with long-tenor bonds, amounting to ₹1,53,418 crore were conducted to reduce the redemption pressure from the proximate maturities of G-Secs and focus on effective liability management.

#### ***Weighted Average Maturity/ Average Time to Maturity***

**19.** A relatively higher level of weighted average maturity (WAM) of debt [also referred to as the average time to maturity (ATM)] implies a lower share of debt that has to be rolled over. In the case of Central Government dated securities, the WAM of dated securities issued in 2020-21 was at 14.49 years while the WAM of outstanding stock as at end-March 2021 was at 11.31 years, thereby indicating a modest roll-over risk for the outstanding debt stock.

**Chart 2.4: Average Time to Maturity of the Central Government Dated Securities**

## Market Risks

**20.** Market risks are typically associated with movement in interest rates and exchange rates which in turn affect the debt servicing cost. These risks are analysed by tracing movements in interest rates and analysing the fixed to floating rate debt ratio, average time to re-fixing and percentage of re-fixing within next 12 months.

### **Fixed–Floating Rate Debt Ratio**

**21.** Floating Rate Bonds (FRBs) are securities issued at variable coupon rate, linked to a benchmark rate and reset at fixed intervals. Currently, the variable rate of FRBs is linked to the average rate of the implicit yield at cut-off prices of the specified number of auctions of Government of India 182-day T-Bills, held up-to the period preceding the coupon reset date and includes a pre-determined spread decided at the time of auction. On the other hand, Inflation Indexed Bonds (IIBs) are bonds where returns are protected against inflation. From the issuer's perspective, floating rate instruments carry interest rate risks on re-fixing while for market participants, they help to diversify their debt portfolio and protect their returns in changing interest rate environment. During 2020-21, ₹88,627.46 crore was raised through primary issuance of FRBs and ₹19953.7 crore through conversion/ switches, total of which worked out to be 8.6 per cent (5.4 per cent excluding conversion/switches) of gross dated securitizing issuance. There were no IIB issuances during 2020-21. The share of outstanding FRBs in total outstanding stock of dated securities at end-March 2021 was only 4.6 per cent. The low share of FRBs insulates the overall debt portfolio from the impact of interest rate movements.

**Table 2.3: Market Borrowings through Floating Rate Instruments**

(₹crore)

Year <b>1</b>	Total Market Borrowings <b>2</b>	Floating Rate	
		FRBs <b>3</b>	IIBs <b>4</b>
2010-11	4,37,000	3,000	-
2011-12	5,10,000	5,000	-
2012-13	5,58,000	0	-
2013-14	5,63,500	0	6,500
2014-15	5,92,000	0	0
2015-16	5,85,000	0	0
2016-17	5,82,000	43,730	0
2017-18	5,88,000	67,235*	0
2018-19	5,71,000	52,000	0
2019-20	7,10,000	60,000	0
2020-21	12,60,116	1,08,580.7*	0

\*Including Conversion/ Switches

### **Average Time to Re-fixing (ATR)**

**22.** Average Time to Re-fixing (ATR) is an indicator, which is used to assess refinancing risk based on the portion of debt exposed to a change in interest rate. This includes debt issued at variable interest rates and debt with a maturity of less than one year. The ATR of the Central Government's dated securities increased from 9.95 years as at end-March 2014 to 10.96 years as at end-March 2021, indicating moderation in interest rate risk.

### *Percentage of outstanding debt due for re-fixing*

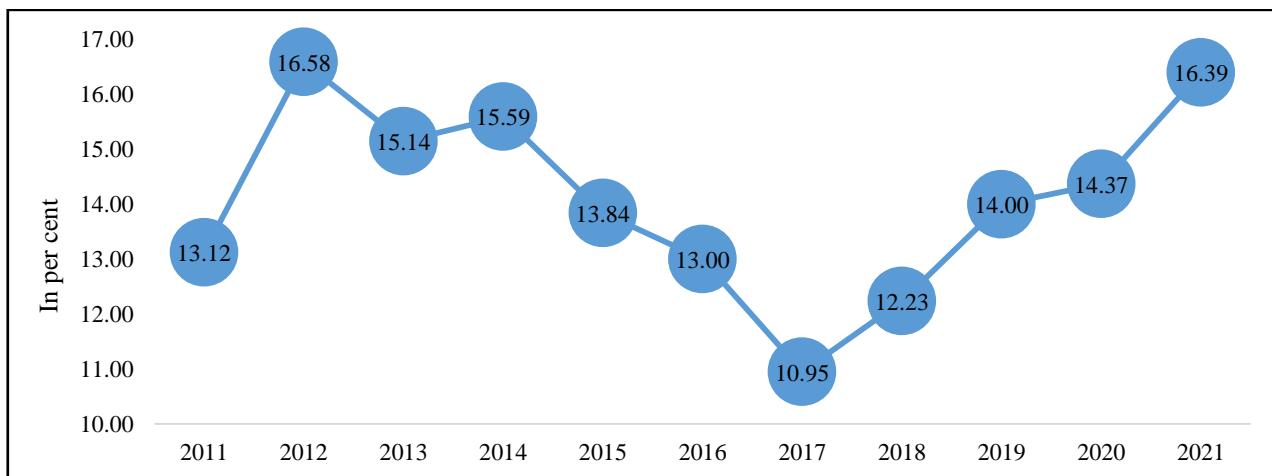

23. Another measure of interest rate risk refers to the extent of marketable debt exposed to interest rate changes. This can be understood in terms of the share of debt maturing in the next 12 months as percentage of total outstanding debt. For the purpose of computation of the percentage of outstanding debt due for re-fixing, the short-term debt has been expanded to include FRBs and IIBs. These calculations reveal that the percentage of outstanding dated securities (including special securities) due for re-fixing in next 12 months has increased from 7.29 per cent at end-March 2020 to 7.60 per cent at end-March 2021. With the inclusion of treasury bills, the percentage of outstanding marketable debt exposed to the interest rate risk works out to 16.39 per cent as at end-March 2021 as compared to 14.37 per cent as at end-March 2020 (**Table 2.4 and Chart 2.5**). As can be seen, the rise has been more under the Treasury Bills due to higher issuance of Bills in FY 2020-21.

**Table 2.4: Percentage of Outstanding Marketable Debt due for Re-fixing in next 12 Months**

(₹crore)

Year	Securities due for re-fixing (Dated Sec+ FRBs +IIBs+ Special Securities)	As per cent of total Outstanding Dated Securities	Securities due for re-fixing (including T-Bills)	As per cent of total Outstanding Marketable Debt
1	2	3	4	5
2010-11	123478	6.27	258347	13.12
2011-12	134966	4.72	402001	14.05
2012-13	138359	4.12	438164	13.04
2013-14	190928	4.95	530063	13.76
2014-15	185216	4.30	534667	12.41
2015-16	197472	4.18	562167	11.89
2016-17	218001	4.32	552803	10.95
2017-18	288821	5.24	674104	12.23
2018-19	414497	6.94	835379	14.00
2019-20	472693	7.29	931103	14.37
2020-21	597475	7.60	1288426	16.39

**Chart 2.5: Percentage of Outstanding Marketable Debt due for Re-fixing in next 12 month**

## Creditor-Concentration Risk

**24.** An important feature of the investor profile of the G-Sec market in India is the dominance of domestic investors. This method of financing is considered as a source of strength as it insulates the debt portfolio from possible currency risk. The ownership pattern of Government of India dated securities has been discussed in detail in the main report (para 2.16 and 5.12-13). Although commercial banks and insurance companies continue to dominate the market, there has been a reasonable diversification of the Government debt portfolio with mutual funds, co-operative banks, regional rural banks, non-banking finance companies, pension funds and FPIs being other investors in G-Sec market. These investors have diverse preferences for investment in G-Secs of different tenors. For instance, mutual funds prefer short-term and liquid securities, co-operative banks prefer short to medium tenor securities, while pension and provident funds prefer to invest in long tenor securities keeping in view the time profile of their liabilities.

**25.** The participation of foreign investors has largely remained limited within the debt portfolio. The Medium Term Framework (MTF) for investment by FPIs in Central Government Securities and State Government Securities (SDLs) was introduced in October 2015. There has been an upward revision in investment limits for Central and State Government Securities since October 2015. Details are available in para 2.17, **part I of Status Paper**.

**26.** To enable non-residents to invest in the domestic G-Sec market, the Fully Accessible Route has been introduced along with the existing Voluntary Retention Route (VRR) and Medium Term Framework (MTF). This is guided by the need to widen the investor base while also keeping in view the policy stance of using a calibrated approach to capital account convertibility. This would also help to minimise the potential risk of interest rate and exchange rate volatility arising as a result of unfavourable domestic and global developments. Details regarding FAR, VRR and MTF can be found in **Chapter 2, Part I of Status Paper**.

**27.** In the context of calibrated reduction in the Statutory Liquidity Ratio (SLR), steps have been undertaken to promote participation from pension funds and retail investors. Among the efforts to boost participation of retail and non-institutional investors several measures have been initiated, which include introduction of non-competitive bidding in primary auctions (5 per cent of the notified amount in the case of G-Secs and 10 per cent for SDLs), establishment of odd lot<sup>23</sup> trading through the NDS-OM system, improvement in G-Secs trading on stock exchanges; introduction of the mandate of retail<sup>24</sup>/ mid-segment<sup>25</sup> targets for primary dealers, facilitating web-based trading access to gilt account holders, removing frictions in inter-depository settlement, etc. To further widen the investors' base, the Reserve Bank of India recently launched the Retail Direct Scheme with an objective to bring Government Securities (G-Sec) within easy reach of the common man by simplifying the process of investment. The investor will be able to place non-competitive bids in primary issuance of all Central

---

<sup>23</sup> Transactions of any value other than the standard market lot size of ₹5 crore are referred to as odd lot. Generally, the value is less than the ₹5 crore with a minimum of ₹10,000/- Odd lot transactions are generally done by the retail and small participants in the market.

<sup>24</sup> Retail category of investors are generally defined as Individuals, Hindu Undivided Family (HUF), Charitable Institutions registered under section 25 of the Indian Companies Act and Universities incorporated by Central, State or Provincial Act or declared to be a university under section 3 of the University Grants Commission Act, 1956 (3 of 1956).

<sup>25</sup> Mid-segment category of investors are generally defined as firms, companies, corporate bodies, institutions, provident funds, trusts, RRBs, co-operative banks and any other entity as may be specified by RBI.

Government securities including Treasury Bills and Sovereign Gold bonds as well as securities issued by various State Governments using an online portal. The Retail Direct Scheme would channelize the savings of middle class, small businessmen and senior citizens directly into risk free government securities.

**28.** Diversified investor base provides flexibility to the Government in its borrowing program. Thus, the opening up of G-Sec market to retail investors would not only widen investor base but would assure stable demand for G-Sec from different investor category so that it does not hamper the loss of demand from any particular owner class.

**29.** In short, the Debt Management Strategy Framework has been geared towards widening of investor base for investment in G-Secs. This process will be continued to ensure stable demand for G-Secs from different investor classes and to make up for loss of demand from any particular investor category.

### **Currency/ Foreign Exchange Risk**

**30.** Currency or foreign exchange risk relates to vulnerability of the debt portfolio to depreciation in the value of the domestic currency *vis-à-vis* the currency of denomination of external loans and the associated increase in the Government's debt servicing cost. Raising debt in foreign currency could be cost-effective (subject to fulfilment of conditions such as stability/appreciation of Rupee against currency/ currencies of debt, stable interest rate regime in host markets, etc.) while also helping to widen the investor base. However, a country with large foreign currency denominated liabilities faces "currency/exchange rate risks", which may turn out to be significant from the perspective of debt servicing cost and macroeconomic stability considerations during the phase of volatility in global capital. In other words, the dependence on foreign currency debt could mean sharp volatility in interest rates and market volumes linked to the uncertainty of external events.

**31.** Achieving an appropriate and stable mix of domestic and foreign currency debt in portfolio is desirable for the stability of debt portfolio. As a conscious strategy, external debt in the Indian context is raised entirely from multilateral and bilateral sources, on concessional terms and long-term tenure. Majority of such loans are for infrastructure and social sector projects. External debt as a percentage of the Central Government's public debt has declined from around 9.1 per cent of public debt in 2011-12 to 5.8 per cent in 2020-21 (**Table 2.14, Part I of Status Paper**).

### **Commodity / Price Risk**

**32.** In November 2015, the Central Government launched the Sovereign Gold Bond Scheme (SGB) to reduce demand for physical gold by providing an alternative investment instrument linked to gold market prices. These bonds are issued to the investors at the average closing price for last week as published by India Bullion and Jewellers Association (**IBJA**) (changed to that of last 3 trading days since October 2017). The bond's redemption price is linked to the price of gold prevailing at maturity date. The investment limit was enhanced to 4 kg per fiscal year for individuals and Hindu Undivided Family (HUF) and 20 kg per fiscal year for Trusts and similar entities during 2017-18. Interest is payable on the face value of the bonds at 2.75 per cent on SGBs issued in 2015-16 and at 2.5 per cent on the SGBs issued in subsequent years. SGBs are redeemable after 8 years at the then prevailing gold

rate and can also be redeemed after 5<sup>th</sup> year at the option of the holder. The details of the year-wise collection of the Sovereign Gold Bond Scheme have been tabled below.

**Table 2.5: Issuance of Sovereign Gold Bonds**

<b>Year</b>	<b>Amount (₹Crore)</b>	<b>Quantity (in kg.)</b>
2015-16	1317.91	4903.29
2016-17	3480.57	11387.77
2017-18	1894.75	6524.69
2018-19	643.17	2030.87
2019-20	2316.37	6131.17
2020-21	16048.74	32351.96
<b>2021-22*</b>	<b>11087.70</b>	<b>23162.26</b>
<b>Total</b>	<b>36,789.21</b>	<b>86,492.01</b>

\*As on Jan 12<sup>th</sup> 2022

Source: Reserve Bank of India

**33.** SGBs are prone to market/ price risk as the liability of the Government is linked to the prevailing price of gold at the time of redemption. It is difficult to estimate market rate prevailing at the time of redemption and therefore to quantify the price risk linked to issuance of these bonds. Therefore, a Gold Reserve Fund was created to provide a cushion to insulate the Government in a limited way from increase in gold prices at the time of redemption. An amount equal to the difference between the interest rate on SGBs and weighted average interest rate of dated securities issued during the concerned year is transferred to the Reserve Fund. The total amount transferred to the Gold Reserve Fund till March 2021 stood at ₹1489.84 crore.

**34.** To sum up, risk analysis reveals that the public debt structure of the country is placed prudently on various risk parameters. Investor base is stable and well-diversified. To continue with the low risk debt structure and to attain the debt management objectives of low cost and prudent level of risk, the MTDS needs to be adopted, which is detailed in the next chapter.

## CHAPTER III

### MEDIUM TERM DEBT MANAGEMENT STRATEGY [2021-24]

The Medium Term Debt Management Strategy or MTDS is a framework to determine the appropriate composition of the debt portfolio. The objective of the debt management strategy is to efficiently raise debt at the lowest possible cost in the medium term while ensuring that financing requirements are met in a seamless manner. Debt management strategy is based on three broad pillars viz., low cost of borrowing, risk mitigation and market development.

2. The debt management strategy assumes a better than average rate of growth for India, a moderate level of inflation according to the Monetary Policy mandate of the Reserve Bank of India (4 per cent with the upper tolerance level of 6 per cent and the lower tolerance level of 2 per cent) for the five year period from April 2021 to March 2026 and comfortable liquidity position seen in FY 2021-22 continuing during 2022-23 and 2023-24. It has also been assumed that the Central Government will revert to the path of fiscal prudence and debt consolidation in a phased manner after having deviated from the same during 2020-21 due to exceptional circumstances.

#### Strategic Benchmark indicators of debt portfolio

3. Strategic benchmarks shape the structure and composition of the debt portfolio in terms of characteristics such as interest rate, currency and overall maturity. It is a management tool for the Government to evaluate its risk tolerance and is indicative of its portfolio preferences with regard to interest cost and risk factors such as market risk, rollover risk and investor concentration risk. The benchmarks set forth in the latest MTDS have been designed to ensure minimal risk and lower borrowing cost.

##### a) Share of Short-Term Debt<sup>26</sup>

4. The share of short-term debt should be maintained within 10 per cent of total outstanding Marketable Debt stock. The leeway of +3 per cent could be exercised in unforeseen developments which may necessitate higher issuance of short-term paper.

**Table 3.1: Benchmark share of Short-Term Debt**

<b>Indicator</b>	<b>Benchmark Share of Short-Term Debt (as per cent of total outstanding Marketable Debt stock)</b>	<b>Leeway (in per cent)</b>
<b>1</b>	<b>2</b>	<b>3</b>
Domestic Short-Term Debt	10	+3

##### b) Average Maturity of Outstanding Stock of Dated Securities

5. Following the strategy of elongating the maturity profile and considering the associated risks and cost, the proposed benchmark for average maturity of the debt portfolio is given in **Table 3.2**.

**Table 3.2: Benchmark relating to Weighted Average Maturity of Dated Securities**

<b>Indicator</b>	<b>Benchmark (in years)</b>	<b>Leeway(in years)</b>
<b>1</b>	<b>2</b>	<b>3</b>
Weighted Average Maturity of Debt	10	± 2

<sup>26</sup> Short-term is defined as the debt maturing in next 12 months.

**c) Issuance Limits**

6. To manage the roll-over risk emanating from high levels of debt becoming due for repayment in a single year, issuance of dated securities is planned in such a way that total of all securities maturing in a financial year does not exceed a limit. The yearly limits are fixed on the basis of a projected rise in debt stock and the maturity distribution of estimated level of outstanding debt with a view to ensure a sustainable debt redemption trajectory. The limits are reviewed periodically keeping in view the macroeconomic environment and redemption profile of debt of the Central Government. In a situation of large borrowing programme and to ensure supply of securities across the yield curve, a calibrated increment of the issuance limits (on individual securities and annual outstanding) is followed. There is a limit in place for issuances under a particular dated security to take care of redemptions falling due on a single day. Additionally, it has been the endeavour of the Government to align the repayment of dated securities with the receipts in the Government account to the extent possible.

**d) Issuance of Sovereign Gold Bonds (SGBs)**

7. Keeping in view the need to minimise potential price risk coming from higher gold price at the time of redemption, SGB issuances are limited to 2 per cent of annual gross issuance of dated securities in a financial year, subject to an absolute limit of about 1 per cent of total outstanding G-Secs (at the end of preceding fiscal year) which will be adhered to.

**e) Indexed and Floating Debt**

8. The issuance of FRBs and IIBs helps towards diversification of debt portfolio while also catering to the investors' demand for such instruments. The targeted benchmark, subject to market conditions, for indexed and floating debt has been fixed at 7 per cent.

**Table 3.3: Benchmark Share of FRBs and Inflation-Indexed Bonds**

<b>Indicator</b>	<b>Benchmark Share for issuances during the fiscal year (as per cent of gross issuances of dated securities during a fiscal year)</b>	<b>Leeway (in per cent)</b>
<b>1</b>	<b>2</b>	<b>3</b>
Indexed and Floating Rate Debt	7	± 4

**f) Share of External Debt in Outstanding Public Debt**

9. The dependence on external debt in public debt is kept low to insulate debt portfolio from the currency risk. The proposed benchmark for external debt is as follows.

**Table 3.4: Benchmark Share of External Debt**

<b>Indicator</b>	<b>Benchmark Share (as per cent of public debt)</b>	<b>Leeway (as per cent of public debt)</b>
<b>1</b>	<b>2</b>	<b>3</b>
External debt	7	±3

## Compliance to DMS

**10.** The market borrowing program for 2020-21 was planned and executed as per the Debt Management Strategy (DMS) with due consideration to the evolving market conditions and shape of the yield curve. An analysis of the debt structure and risk parameters reveals that the share of short-term debt, weighted average maturity of debt, share of external debt, and indexed and floating debt were within the limits assigned in MTDS. The details, as on March 31, 2021, are given in the table below.

**Table 3.5:Status as on March 31, 2021vis-à-vis Benchmarks**

	Benchmark	Leeway	Current status
Share of Domestic Short-Term Marketable Debt to Outstanding Marketable Debt stock	10 per cent	+3 per cent	12.15* per cent
Weighted Average Maturity of Outstanding Dated Securities	10 years	+ / -2 years	11.31 years
Issuance of SGBs as percentage of annual gross of dated securities in FY 2020-21	≤ 2 per cent	-	1.27 per cent
SGBs as percentage of total outstanding G-Secs	≤ 1 per cent	-	0.22 per cent
Indexed and Floating Rate Debt in total issuances of dated securities during FY 21	7 per cent	+ / -4 per cent	8.62 per cent
Share of External Debt in total outstanding Public Debt stock	7 per cent	+ / -3 per cent	5.80 per cent

Notes:

\*Including Special Securities

## Market Development

**11.** A well-developed Government Securities market is a pre-requisite for successful execution of the Government borrowing programme and remains an important strategic objective in the medium term. Introducing standardised benchmark securities across the yield curve, issuing according to market demand and maintaining transparency in issuances, maintaining continuous dialogues with the market helps to further market development.

**12.** The MTDS faces risks on both sides, demand and supply. Supply side risks arise on account of higher borrowings by the Government in view of adverse effects of Covid on economy and government finances. Higher borrowing by the States also adds to supply in the market which affects all the borrowers. On the demand side, the higher growth in credit off-take relative to deposit growth affects the demand for Government securities from the banking sector. A gradual decrease in the mandated G-Secs holding by the commercial banks, as is being followed by the RBI, is expected, other things remaining unchanged, to affect demand from the banking sector. Lack of interest from FPIs in Government securities is also adding to this risk. Demand side risks are being addressed by widening of the investor base in a phased manner. Retail Direct Scheme launched by RBI recently is expected to help in widening the investor's base. FAR scheme launched for FPIs is also expected to bring in additional group of FPIs to Government securities. From the foregoing, it is evident that frictions arising from demand-supply imbalances need to be modulated on an ongoing basis within the MTDS framework.

**13.** Going forward, it is important to ensure that there is an improvement in liquidity in the secondary market in G-Secs through higher turnover and an increase in number of market participants in order to minimise the interest rate risk emanating from illiquidity premium for dated securities. As in the past, measures to improve liquidity in the G-sec market would include continuation of security consolidation and building critical mass under benchmark securities. Issuance of benchmark securities of different tenors by issuing sizeable volumes is expected to enhance investor participation and liquidity.

### **MTDS Implementation - Way forward**

**14.** In order to implement the MTDS for 2021-22 to 2023-24, the following steps would be undertaken.

- a) Maintain transparency in the market borrowing programme by effective dissemination of borrowing calendar to investors;
- b) Conduct investor interaction and consultations with other stakeholders on a continual basis, keeping in view the market demand;
- c) Issue benchmarks of select tenors;
- d) Build up liquidity buffer for better cash management;
- e) Elongate maturity profile of the debt portfolio;
- f) Build a balanced and smooth yield curve;
- g) Continue to issue a variety of instruments such as inflation linked bonds, floating rate bonds taking into account investor preferences;
- h) Continue with rationalisation of interest rates on small savings schemes and other instruments like PF, special securities, etc. in line with the interest rates prevailing in the economy;
- i) Support diversification of domestic investor base and calibrated opening of the Government securities market to foreign;
- j) Manage passive consolidation with large benchmark issuances and active consolidation through buy-backs/switches/conversions for effective liability management;
